Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2000.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

The website is an established Brazilian cycling publication that presents news, competition coverage, bicycle and e-bike launches, reviews, training material, event information, advertising opportunities, and classified listings, with an apparent business model based on publishing, advertising, and listing engagement.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behavior, or confirmed malicious reputation pattern were observed. The domain's long-established registration and extensive archival record strongly support continuity rather than recent creation or suspicious repurposing. One isolated malicious classification is outweighed by the broader clean reputation evidence and does not constitute a confirmed threat finding.

- The domain-registration record shows registration on 1 December 1999 (~26.68 years old) and expiry on 1 December 2026.
- The web archive contains 584 snapshots spanning 11 May 2000–3 February 2026 (27 years tracked), with no suspicious repurposing or established semantic drift.
- The homepage contains no login form, hidden form, sensitive-input form, cryptocurrency feature, or detected brand-impersonation indicator.
- External reputation telemetry records 1 malicious classification, 58 harmless classifications, 33 undetected classifications, no browser safe-browsing detection, no confirmed external blacklist, and no reported abuse associated with the observed delivery address.

Regulatory Verification Notes

Bikemagazine presents itself as an editorial cycling publication, not as a regulated financial, investment, payment, or cryptocurrency service. Accordingly, the absence of an asserted financial-services licence is consistent with its apparent activity and is not an adverse legitimacy signal. The homepage navigation offers dedicated "About," "Contact," and "Advertise" routes, providing appropriate entry points for corporate and commercial information; the supplied homepage evidence does not establish the detailed disclosures contained on those pages.

- The homepage identifies the site as a cycling-news publication and organizes its content into competitions, cycling, mountain biking, launches, e-bikes, reviews, technology, training, maintenance, events, and reporting.
- The homepage provides navigation to dedicated About, Contact, Advertise, Archive, and Classifieds areas.

- The domain-registration record identifies a named registrant, Jos Marcos Adami ME, rather than an anonymous privacy service.
- The homepage links to established social presences on Twitter, Facebook, YouTube, and Instagram.

What to Verify Next

For ordinary editorial use, no enhanced verification is indicated. Before entering a private transaction arising from a commercial listing, the prospective purchaser should independently confirm the counterparty, bicycle ownership, condition, price, payment destination, and delivery arrangements; advertising clients should review the applicable placement and billing terms through the site’s official channels.

- The classifieds area distinguishes recent and popular advertisements and provides a route for submitting an advertisement.
- The homepage’s only detected form is a search form, with no sensitive fields or untrusted submission destination.
- Two successful behavioral runs found no cloaking, hidden forms, clipboard hijacking, wallet interaction, external password submission, or suspicious inline scripts.
- All four observed external data requests and all four external submissions used recognized destinations; none was classified as non-whitelisted.

Summary Verdict

The site is legitimate, established, and trustworthy, with strong convergence among historical continuity, substantive editorial content, benign interaction behavior, identifiable administration, and broadly clean external reputation. No material contradiction undermines its stated identity or apparent purpose.

Infrastructure Integrity

The site uses mainstream CDN and WAF protection, placing all observed addresses at the delivery edge and limiting direct exposure of the origin server. This is a sound defensive configuration and a mitigating security factor, although infrastructure protection alone is not proof of legitimacy.

- Served from AS13335 (CLOUDFLARENET – Cloudflare, Inc., US); all four observed IPv4 and IPv6 addresses were Cloudflare edge servers.
- The site’s transport encryption uses a valid DV TLS certificate issued by WE1, valid until 15 October 2026.

Closing Assessment

Normal interaction, including standard browsing and account login if offered through the site’s ordinary workflow, is appropriate; routine counterparty due diligence remains advisable for transactions with individual advertisers.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	80/100

Identity verification confidence	80%
----------------------------------	-----

- Trusted social count=4

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of bikemagazine.com.br.

- The request stayed on bikemagazine.com.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2026-12-01. NOTED
- The earliest public archive of this site is from 2000-05-11. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about bikemagazine.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
