

Is bitbucket.org legit? TrustSniffer's high-trust assessment: 100/100

bitbucket.org

Verdict

100

OUT OF 100

HIGH TRUST

bitbucket.org appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 70%.

What this site appears to be

Official Bitbucket product page describing features, CI/CD, security, AI integrations, customer testimonials, and pricing. Primary purpose is marketing and lead capture for Atlassian's Bitbucket Cloud offering.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2017.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Bitbucket is an Atlassian-branded software-development platform that presents CI/CD, code review, cloud security, DevSecOps, Jira integrations, AI-assisted development, pricing, and sign-in or registration options to visitors. Its apparent business model is subscription-based SaaS, enterprise licensing, and related cloud services for software teams and organizations.

Scam/Impersonation Risk

No contradictions were observed: the available evidence contains no phishing, impersonation, malicious-reputation, or confirmed blacklist indicators. The homepage presents a coherent corporate product offering rather than an investment, payment, or credential-harvesting proposition. Automated interaction did record elevated external activity, DOM changes, and console errors, but these were not accompanied by hidden forms, externally submitted password fields, wallet activity, clipboard manipulation, or cloaking; they are therefore better understood as dynamic-page and implementation signals than as evidence of abuse. The apparent connection to Atlassian is evidence-consistent, although independent real-world operator verification remains incomplete.

EVIDENCE

- The domain registration record shows registration in 1997 and an age of 28.73 years.
- Web-archive evidence records 2 snapshots spanning 2017–2026, covering 10 years.
- The homepage is classified as a professional corporate product page with no detected red flags or brand-impersonation indicators.
- Browser interaction recorded 0 hidden forms, 0 password submissions to external forms, 0 wallet-connect runs, 0 clipboard-write events, and no cloaking.

Regulatory Verification Notes

Bitbucket is presented as a commercial SaaS offering with subscription plans, enterprise licensing, and cloud services, rather than as a financial product requiring the type of regulated investment licensing associated with brokers or payment institutions. The available page content does not establish a financial license or registration number; this is a verification and disclosure item, not evidence of a scam. The site presents an established corporate identity and a high-authority public presence, while the operator connection should remain described as apparent rather than independently proven. Registration through MarkMonitor and the clean external reputation materially support the site's established posture.

EVIDENCE

- The site is hosted on AS16509, Amazon.com, Inc. (AMAZON-02), US.
- The site's TLS certificate is issued by Amazon ECDSA 256 M04, uses DV validation, and is valid through 2026-12-23T23:59:59+00:00.
- The homepage provides product, pricing, security, integration, and enterprise-service content consistent with an established SaaS business model.
- No match was identified in the supplied broker-reputation dataset.

What to Verify Next

Before credential or payment interactions, an independent party should confirm the relevant Atlassian merchant identity, review the applicable subscription, cancellation, refund, and service terms, and confirm available payment protections. The official pricing and sign-in or registration paths should be reached through independently verified Atlassian channels rather than through unsolicited messages or advertisements. Where organizational procurement or regulated-sector use is involved, the contracting entity and applicable data-protection or service commitments should also be confirmed through formal business documentation.

EVIDENCE

- The homepage links to dedicated pricing, signup, signin, cloud, features, and Bitbucket Cloud pricing paths.
- The page identifies Bitbucket as part of the Atlassian platform and links to Atlassian's corporate site.
- The page includes security, compliance, enterprise, and migration-related content relevant to organizational procurement.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture for ordinary Bitbucket use. No scam or impersonation contradiction was identified, but the real-world operator identity is not independently verified to a conclusive standard.

Infrastructure Integrity

CDN/WAF protection is present, and all observed addresses resolve to CDN edge infrastructure rather than an identified origin candidate. This reduces direct exposure of the hosting environment and is a mitigating security signal, although protective infrastructure alone does not prove legitimacy.

Closing Assessment

Ordinary browsing and service evaluation are proportionate to the assessed posture; independent merchant-identity, service-terms, and payment-protection checks should be completed before submitting credentials or making payments.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	76%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of bitbucket.org.

- The request stayed on bitbucket.org. It was not redirected to another domain. CLEAR
- Registration is published under MarkMonitor, Inc.. CLEAR
- DNS for this domain is served by awsdns-35.org, across 4 name servers. NOTED
- The registration is paid up to 2026-11-23. NOTED
- The earliest public archive of this site is from 2017-11-09. CLEAR
- It is hosted on AMAZON-02, from a server in NL. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about bitbucket.org at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a

legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
