

Is bitcoin.com legit? TrustSniffer's high-trust assessment: 75/100

bitcoin.com

Verdict

75

OUT OF 100

HIGH TRUST

bitcoin.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-03 by automated analysis. Classification confidence 70%.

What this site appears to be

Finnish-language Bitcoin.com homepage promoting cryptocurrency buying, selling, swapping, wallet and account products, rewards of up to 30% APY, market data, news, education, reviews, and crypto-gambling partners. It identifies Saint Bitts LLC, claims operation since 2015, and presents both self-custodial and account-based services.

Evidence status and limitations

Evidence completeness: UNKNOWN

- Module-level completeness metadata is unavailable for this legacy report.

At a glance

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2025.
- VirusTotal and Google Safe Browsing had no flags for this domain; its hosting IP carries AbuseIPDB reports below the confidence level TrustSniffer treats as a flag.

Full analysis

Overview

Bitcoin.com is an established cryptocurrency portal that presents wallet and account services, digital-asset transactions, market information, news, education, reviews, and partner-supported content to retail cryptocurrency users.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or confirmed malicious reputation signals were observed. The long-established domain, substantial global traffic footprint, clean major threat-intelligence results, and absence of suspicious browser behavior collectively support the conclusion that this is the legitimate Bitcoin.com service rather than an imitation or short-lived fraud operation. Limited archival coverage does not conflict with the authoritative registration history and provides no evidence of suspicious repurposing.

- Domain-registration records show that bitcoin.com was registered in 2008 and is approximately 18.59 years old, with registration through Namecheap, Inc. and expiry scheduled for 2031.
- The web archive contains 1 snapshot dated 2025-08-27, representing 1 year tracked; the historical analysis found no semantic drift or suspicious repurposing.
- External reputation checks found 0 malicious and 0 suspicious detections, no phishing finding, and no confirmed malicious-list entry for the domain.
- Global traffic data places the site at rank 10,341, demonstrating a strong, established audience footprint.

Regulatory Verification Notes

The homepage identifies Saint Bitts LLC and states that the service has operated since 2015. It presents both self-custodial and account-based offerings, including cryptocurrency purchases, sales, swaps, rewards advertised at up to 30% APY, and promotions involving cryptocurrency-gambling partners. These activities create ordinary custody, investment-loss, yield, and counterparty considerations intrinsic to the business model. The reviewed content does not clearly state a financial licence, licensing authority, or registration number; this is a regulatory-disclosure point, not evidence of impersonation or fraud. No matching broker record was identified in the supplied third-party broker context, but that result is not a legal determination.

- The Finnish-language homepage names Saint Bitts LLC, claims operation since 2015, and distinguishes self-custodial products from account-based services.
- The homepage advertises rewards of up to 30% APY and includes cryptocurrency casino and gambling-partner content.

- The reviewed homepage does not make a clear licensing claim or provide a licensing authority or licence number.
- The site's transport encryption uses a YR1-issued DV TLS certificate valid until 2026-09-20; hosting telemetry identifies AS16509, Amazon.com, Inc., United States.

What to Verify Next

Institutional onboarding should confirm the named operator against relevant corporate records and reconcile the applicable contracting entity with the current terms and privacy documentation. Where a service constitutes regulated activity in the user's jurisdiction, its authorization should be confirmed directly with the relevant official registry. Product terms should be reviewed for custody arrangements, withdrawal controls, return conditions, fees, counterparty exposure, and dispute handling. Official support and social channels should be confirmed through independently obtained references before operational reliance.

- The captured homepage contained no sensitive form, hidden form, externally submitted password form, or untrusted form destination.
- Two successful behavioral runs detected no wallet-drainer activity, clipboard hijacking, cloaking, suspicious inline scripts, or browser fingerprinting.
- All 25 observed external XHR requests and all 10 external POST requests were directed to recognized destinations.
- The homepage presents social-presence references for Telegram, X, Discord, and LinkedIn.

Summary Verdict

The available evidence supports a confident assessment that Bitcoin.com is a legitimate, established, and trustworthy website. Its provenance, public reach, technical operation, content depth, and clean reputation converge without contradictory identity or threat signals. The principal considerations arise from the inherent financial risk of its service category rather than from website authenticity concerns.

Infrastructure Integrity

The website uses a trusted CDN/WAF deployment with five identified edge addresses and three potential origin candidates. This architecture reduces direct exposure of core services, although it is a protective control rather than independent proof of legitimacy.

Closing Assessment

Normal interaction, including account login, standard use, and routine transactions, is appropriate; financial commitments should remain subject to ordinary institutional due diligence and risk controls.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	73/100
Identity verification confidence	37%

- Trusted social count=1

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of bitcoin.com.

- The request stayed on bitcoin.com. It was not redirected to another domain. CLEAR
- Registration is published under NAMECHEAP INC. CLEAR
- DNS for this domain is served by googledomains.com, across 4 name servers. NOTED
- The registration is paid up to 2031-01-04. CLEAR
- The earliest public archive of this site is from 2025-08-27. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about bitcoin.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
