

Is bitsoftwares.ir a scam? TrustSniffer's high-risk assessment: 0/100

bitsoftwares.ir

Verdict

0

OUT OF 100

CRITICAL RISK

bitsoftwares.ir shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 55%.

What this site appears to be

A minimal page that displays a single timestamp string (Friday, 21st August, 2026 1:10:44 AM). No links, forms, or monetization elements detected.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

At a glance

The checks that decide most of this verdict.

The page as captured

<https://bitsoftwares.ir/>

Thursday, 20th August, 2026 10:10:43 PM

What bitsoftwares.ir served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2022.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website is a minimal timestamp-only web page that displays “Friday, 21st August, 2026 1:10:44 AM” without presenting a discernible company, service, product, transaction flow, or stated business purpose.

Scam/Impersonation Risk

No identity contradiction or page-level brand impersonation was detected, and the homepage itself contains no login form, payment function, or overtly malicious interaction. However, the domain is recorded as **blacklisted**, with multiple malicious detections from external security assessments, including Tier-1 detections associated with Kaspersky and Sophos. This is a material contradiction to treating the site as benign, even though the observed page is functionally inert and displays only a timestamp. The absence of visible phishing mechanics on the captured page does not offset the confirmed reputation signal.

EVIDENCE

- External reputation assessment recorded 14 malicious detections and 1 suspicious detection; Kaspersky and Sophos were among the flagged vendors.
- The homepage returned a minimal timestamp-only presentation with no links, forms, login elements, or monetization features.
- The domain-age record reports 4.375085557837098 years; archival observations are dated from 2022-04-06T03:57:52Z through 2025-08-07T23:19:05Z, with 0 recorded snapshots across 4 tracked years.

Regulatory Verification Notes

The site provides no substantive legal, corporate, licensing, or service disclosures in the observed content. Because the page contains no identifiable operating entity or regulated offering, licensing status cannot be established from the website and should be treated as a regulatory verification gap rather than proof of unlawful operation. Independent identity verification remains unresolved. The available broker-intelligence dataset returned no match; that result is contextual only and is not a licensing or regulatory determination. The technical setup confirms ordinary domain registration through IRNIC, Hetzner hosting, and domain-validated transport encryption, but these infrastructure facts do not establish operator legitimacy.

EVIDENCE

- The homepage contains only a timestamp and no corporate, legal, licensing, terms, or contact disclosure.
- The domain registrar is IRNIC.
- Hosted on AS24940 (HETZNER-AS - Hetzner Online GmbH, DE).
- TLS certificate issued by YR2 at DV validation level, valid to 2026-09-28T00:35:41+00:00.

What to Verify Next

Before any sensitive interaction, an organization should independently establish the operator's legal identity and confirm whether any intended activity requires authorization by a relevant financial or digital-services regulator. Contact channels and any claimed affiliation should be confirmed through an independently sourced route rather than relying solely on information supplied by the site. Security teams should also compare the domain against current organizational blocklists and monitor for changes in page content or functionality.

EVIDENCE

- The captured site provides no identity or regulatory material against which an operator claim can be validated.
- No account, payment, or service workflow is exposed on the observed page, so the intended business purpose remains unconfirmed.
- The available broker-intelligence context contains no matched entity record.

Summary Verdict

The overall posture is critical and unsuitable for sensitive interaction. The site's minimal presentation does not provide sufficient legitimacy evidence, while confirmed external malicious and blacklist signals create a decisive

basis for treating the domain as unsafe for credentials, account access, or financial activity.

Infrastructure Integrity

The website is protected by a CDN/WAF layer, and the observed edge address is 5.9.151.249 on AS24940 operated by Hetzner Online GmbH; the origin server was not observable in this analysis. This infrastructure provides some exposure mitigation, but it cannot counteract the domain's external threat reputation or establish the legitimacy of the operator.

Closing Assessment

Interaction should be limited to passive observation, with no credential submission, account login, downloads, payment activity, or other sensitive action.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

- 01 Governance Risk

 - The public registration record for this domain is incomplete.
Registration and ownership rule:KF_WHOIS_INCOMPLETE
- 02 Sensitive Interaction Risk

 - The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
 - An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of bitsoftwares.ir.

- The request stayed on bitsoftwares.ir. It was not redirected to another domain. CLEAR
- Registration is published under IRNIC. CLEAR
- DNS for this domain is served by bitsoftwares.ir, across 2 name servers. NOTED

- The earliest public archive of this site is from 2022-04-06. CLEAR
- It is hosted on HETZNER-AS, from a server in DE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about bitsoftwares.ir at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
