

Is blockmedia.co.kr legit? TrustSniffer's high-trust assessment: 92/100

blockmedia.co.kr

Verdict

92
OUT OF 100

HIGH TRUST

blockmedia.co.kr appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-03 by automated analysis. Classification confidence 70%.

What this site appears to be

Korean blockchain and financial-news homepage publishing current reporting, market coverage, research, opinion, and digital-asset analysis. The page provides a detailed legal publisher identity, business registration and press-registration information, named officers, a Seoul address, email, telephone number, editorial policies, and social channels. It contains extensive advertising-consent controls but no evident investment solicitation, wallet request, credential harvesting, or deceptive return promise.

Evidence status and limitations

Evidence completeness: UNKNOWN

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2018.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an established Korean digital-news publication providing current reporting, research, opinion, and market analysis across blockchain, cryptocurrency, banking, securities, public policy, finance, technology, and artificial intelligence, with an apparent media business model supported by advertising, partnerships, subscriptions, or newsletters rather than investment solicitation.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing indicators, deceptive return promises, wallet requests, or credential-harvesting behavior were observed. Its longstanding domain and continuous publishing history converge with a clean external threat reputation and a meaningful global traffic footprint. The homepage presents conventional editorial activity through dated articles, named journalists, research, opinion, and market coverage; its references to BTC, ETH, Solana, Dogecoin, Zcash, and other digital assets occur in a journalistic context rather than as deposit or trading solicitations.

- The domain was registered on 7 December 2017 and is approximately 8.66 years old; the registration identifies blockmedia Inc. as the owner and Whois Corp. as the registrar.
- The web archive contains 198 snapshots spanning 6 January 2018 to 1 March 2026, covering nine tracked years without evidence of suspicious repurposing or semantic drift.
- External reputation checks recorded no malicious or suspicious detections, no phishing finding, no abuse reports, and no matched threat signatures; the domain holds a global traffic rank of 74,387.
- The homepage contains only a search form, with no sensitive or hidden form, external password submission, wallet-provider interaction, clipboard hijacking, cloaking, or suspicious inline script detected.

Regulatory Verification Notes

The homepage provides a substantive publisher identity comprising corporate and press-registration information, named officers, a Seoul address, telephone and email channels, and editorial policies. This is the disclosure profile expected of an accountable news publisher. The site does not claim to operate as a financial broker or investment platform, and the supplied evidence contains no claim of financial-services authorization requiring validation; accordingly, the absence of such a licence claim is not an adverse legitimacy indicator.

- The homepage identifies the publisher and presents business-registration and press-registration details alongside named organizational officers.
- The same page publishes a physical Seoul address, direct contact channels, editorial policies, and official social presences on YouTube, Telegram, and X.
- The site is served from AS16509 by Amazon.com, Inc., with the observed hosting address associated with the AWS Asia Pacific (Seoul) Region.
- The site’s transport encryption uses a valid domain-validated certificate issued by YR2, valid until 7 September 2026.

What to Verify Next

Institutional onboarding may confirm the published corporate and press-registration particulars against the relevant Korean records, establish that contractual or advertising correspondence uses the publisher’s documented business identity, and review the privacy and advertising-consent terms against the institution’s data-protection requirements.

- The homepage supplies the corporate and press-registration particulars needed for an independent registry comparison.
- Its consent controls describe personalized advertising, cross-site data matching, device linking, and optional precise geolocation, making privacy review relevant to enterprise policy.
- The publication exposes named management, location, telephone, and policy information that can support routine counterparty due diligence.

Summary Verdict

The site presents as a legitimate, established, and trustworthy digital-news publisher. Its coherent corporate identity, sustained editorial operation, historical continuity, clean threat reputation, and technically sound delivery support normal interaction, including account login and standard use.

Infrastructure Integrity

The site operates on identified Amazon infrastructure with valid encrypted transport. No trusted CDN or WAF layer was confirmed, but the available evidence does not indicate concealed-origin abuse or a suspicious network posture; infrastructure protection is therefore a supporting operational control rather than independent proof of legitimacy.

Closing Assessment

Prospective users may engage with the publication normally, while regulated organizations should complete their standard counterparty and privacy review before entering a commercial relationship.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	73/100

Identity verification confidence	74%
----------------------------------	-----

- Trusted social count=1

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of blockmedia.co.kr.

- The request stayed on blockmedia.co.kr. It was not redirected to another domain. [CLEAR](#)
- Registration is published under Whois Corp.(http://whois.co.kr). [CLEAR](#)
- DNS for this domain is served by yesnic.com, across 4 name servers. [NOTED](#)
- The registration is paid up to 2027-12-07. [CLEAR](#)
- The earliest public archive of this site is from 2018-01-06. [CLEAR](#)
- It is hosted on AMAZON-02, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about blockmedia.co.kr at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
