

Is blog.jp legit? TrustSniffer's high-trust assessment: 90/100

blog.jp

Verdict

90

OUT OF 100

HIGH TRUST

blog.jp appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 55%.

What this site appears to be

Onboarding/help page for livedoor Blog describing features (custom domains, apps, analytics), migration from other platforms, and special plans for organizations. No forms or financial solicitation present.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

This website is an onboarding and help presentation for livedoor Blog, a blog-hosting service offering custom-domain configuration, mobile publishing, migration support, analytics, and free and paid service options. Its apparent purpose is to introduce the platform and guide prospective users through normal blog creation and management.

Scam/Impersonation Risk

No phishing, malicious-content, blacklist, or identity-contradiction findings were observed. The page presents a coherent blog-hosting use case, contains no login or sensitive-data form, and makes no financial solicitation. A superficial page-similarity signal associated the content with “g.page,” but that signal was not corroborated by the page title, livedoor Blog branding, subject matter, or observed behavior and does not establish impersonation. The domain’s long history, clean external reputation, and top-tier global traffic footprint provide converging evidence of an established site.

EVIDENCE

- The domain registration record shows creation on 2003-03-01 and an age of 23.47 years.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and no phishing or blacklist finding.
- The homepage is an informational blog guide; its capture identified no login form, sensitive form, hidden form, or financial solicitation.

Regulatory Verification Notes

The available evidence is consistent with an established, apparently legitimate consumer software service, but the real-world operator identity is not independently verified. The captured page does not provide a licensing claim or registration number; for a blog-hosting service, this is a transparency and business-identity verification matter rather than evidence of a scam. The page’s stated model—advertising-supported free access alongside premium and domain-related services—also means that billing, cancellation, and service terms should be assessed before paid use. No broker-related third-party association was identified; that is contextual reputational information, not a licensing determination.

EVIDENCE

- The site's transport encryption uses a TLS certificate issued by YR2 with DV validation, valid to 2026-10-18.
- The site is served from AS38631, operated by LINE - LY Corporation, JP.
- The captured guide describes blog-hosting services and paid-plan options but contains no license claim or license number.

What to Verify Next

Before credential or payment interactions, independently confirm the legal operator through an authoritative corporate or service channel and review the site's terms, privacy notice, pricing, cancellation, and refund provisions. Official support channels should be confirmed through an independent route rather than relying solely on contact details encountered during an onboarding flow. Any paid transaction should use payment protections appropriate to the account and jurisdiction.

EVIDENCE

- The homepage footer provides links labelled Terms of Use, Guidelines, Privacy, Help, and Sitemap for review.
- The onboarding page identifies free and paid service arrangements, making billing and cancellation terms relevant to the proposed use.

Summary Verdict

The overall posture is **high trust and low risk**, and the available evidence is consistent with an established, apparently legitimate website. This assessment supports ordinary use of the service, while the absence of independent operator verification means that legitimacy and real-world identity should not be treated as conclusively proven.

Infrastructure Integrity

The site resolves to LINE - LY Corporation, JP, on AS38631 and appears to use direct hosting rather than a detected CDN edge layer, with two likely origin addresses identified. The hosting environment and identifiable network ownership are mitigating technical signals, but infrastructure alone does not prove the operator's identity or business legitimacy.

Closing Assessment

Routine informational use is proportionate; before submitting credentials or making payments, the prospective user should complete the independent identity, terms, and payment-protection checks outlined above.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status

UNVERIFIED

Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of blog.jp.

- The request stayed on blog.jp. It was not redirected to another domain. [CLEAR](#)
- DNS for this domain is served by awsdns-37.net, across 4 name servers. [NOTED](#)
- The registration is paid up to 2027-03-31. [NOTED](#)
- It is hosted on LINE, from a server in JP. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about blog.jp at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
