Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2007.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an established Portuguese-language news outlet covering Santo Antônio de Jesus, Bahia, surrounding municipalities, and wider Brazilian affairs through dated reporting on politics, public safety, health, education, sports, economics, and community events, with an apparent conventional media model based on readership, advertising, or sponsorship.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behavior, or other scam indicators were observed. The homepage presents substantial, internally consistent editorial content rather than payment solicitation, credential harvesting, investment promotion, or another deceptive value-transfer mechanism. Its long domain tenure and continuous historical record strongly support an established publishing operation.

- The homepage contains dated news summaries, geographic and topical navigation, social-sharing controls, and a single nonsensitive search form; it contains no login form, hidden form, or sensitive-data request.
- The domain was registered on 1 February 2007 and is approximately 19.51 years old.
- The web archive records 492 snapshots from 23 February 2007 through 22 July 2026, spanning 20 tracked years, with no suspicious repurposing or semantic drift detected.
- External reputation checks recorded zero malicious and zero suspicious detections, no phishing finding, no threat-signature match, and no reported abuse against the assessed delivery address.

Regulatory Verification Notes

The site operates as a general news publisher and does not present financial services, deposits, investments, or other regulated financial activity on the assessed homepage. Consequently, the absence of a financial licence claim is consistent with its apparent business model rather than an adverse regulatory signal. Domain registration identifies Pontual Espaço Publicitario Ltda. as the registrant, while the supplied homepage evidence does not establish the extent of any separate corporate, editorial-governance, or corrections disclosures.

- The homepage describes and organizes local, regional, and national journalism without offering a payment, investment, or deposit-based service.
- Domain registration records identify Pontual Espaço Publicitario Ltda. as the owner and show registration extending to 1 February 2028.
- The site is served from AS13335 by Cloudflare, Inc.; its DV TLS certificate was issued by WE1 and is valid until 16 September 2026.

- The homepage has an established top-one-million traffic presence and mid-range page authority, providing contextual evidence of public visibility without determining regulatory status.

What to Verify Next

For institutional reliance on published material, due diligence should confirm the publisher’s current legal identity, editorial accountability, corrections process, and official contact channels through independent records. Material news claims should also be corroborated against primary government, judicial, municipal, or other authoritative sources appropriate to the subject.

- The homepage covers consequential subjects including Brazilian politics, policing, municipal services, healthcare, and public infrastructure.
- The homepage provides search and topical navigation that can support source review, chronology checks, and comparison of related coverage.
- The assessed content includes a public contact channel and article-sharing functions, enabling confirmation of editorial communications through independently established channels.

Summary Verdict

The website is legitimate, established, and trustworthy. Its sustained publishing history, coherent editorial purpose, clean external reputation, stable behavior, and absence of contradictory or deceptive signals support normal interaction, including account login and standard use where such functions are offered.

Infrastructure Integrity

Cloudflare provides the site’s CDN and WAF layer, with all observed addresses belonging to edge infrastructure and no direct origin address exposed during the assessment. This arrangement reduces direct server exposure and provides a meaningful security mitigation, although protective infrastructure is not independently proof of legitimacy.

Closing Assessment

Prospective users may engage with the website normally, while institutions using its reporting for consequential decisions should apply ordinary source-corroboration and publisher due-diligence procedures.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about blogdovalente.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
