Key findings

- Automated classification: Not Scam.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is a Vietnamese Ministry of Public Security information portal presenting news, press releases, legal and policy guidance, institutional information, and public-service resources. Its apparent purpose is to provide government information and citizen services rather than to operate a commercial or financial business.

Scam/Impersonation Risk

No contradictions were observed. The portal's content, institutional presentation, and stated public-service purpose are consistent with a government information site, and the available reputation checks found no malicious, suspicious, phishing, or impersonation indicators. The site also presents a substantial global traffic footprint and established page authority, supporting the conclusion that it is an apparently legitimate, established website. The real-world operator identity remains independently unverified, so the on-page institutional identity should be treated as evidence-consistent rather than conclusively proven.

EVIDENCE

- The homepage identifies “Cổng Thông tin điện tử Bộ Công an” and provides ministry news, legal-policy material, public-service information, and citizen guidance.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and no confirmed blacklist or phishing result for the website.
- The website has a Tranco rank of 20139 and is within the top 1 million sites.
- The homepage analysis found no login form, sensitive form, hidden form, wallet connection, password submission to an external destination, or brand-impersonation indicator.

Regulatory Verification Notes

The site's content is consistent with a state-run informational portal, not a regulated commercial or financial service. Its pages identify the Vietnamese Ministry of Public Security and include institutional, legal-policy, and public-service sections; however, independent verification connecting the website to the real-world institution is not complete. No commercial license claim or license number is presented, which is a transparency point for any service involving regulated activity but is not, on its own, evidence of deception. The absence of a broker match in the available third-party dataset provides contextual support only and is not a legal or licensing determination.

EVIDENCE

- The homepage and navigation expose sections for institutional introduction, ministry leadership, functions and duties, legal policy, legal documents, and public services.
- The page classification describes the site as “Government / Official,” with a state-run informational business model and no identified red flags.
- The available third-party broker dataset returned no match.

What to Verify Next

Before credential or payment interactions connected with a specific public service, an institution should confirm that the requested action is expected through an independently obtained official government channel and that the transaction is covered by appropriate payment protections. Any material communication or service request should also be cross-checked against independently sourced ministry contact details rather than relying solely on information supplied during the session.

EVIDENCE

- The site provides a dedicated English-language version, an institutional introduction area, and a public-service portal, allowing the stated purpose and service pathway to be cross-checked within the site.
- The homepage is primarily informational and publishes news, policy updates, legal documents, announcements, and citizen guidance rather than commercial offers.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate government website and supports a high-trust, low-risk posture for ordinary informational use. The conclusion is strong at the site-content and technical-reputation level, while independent confirmation of the real-world operator remains incomplete.

Infrastructure Integrity

The website is protected by Incapsula CDN/WAF infrastructure, which is a mitigating control against direct exposure and common web abuse but is not proof of institutional legitimacy. Observed addresses were CDN edge infrastructure, with no origin candidate identified in this analysis. Transport security is provided through a valid Organisation Validation certificate from DigiCert, providing a sound technical foundation for ordinary browsing.

EVIDENCE

- Served through AS19551, INCAPSULA - Incapsula Inc, US; observed edge IPs were 45.60.65.64 and 45.60.67.64.
- TLS certificate issued by DigiCert Global G2 TLS RSA SHA256 2020 CA1, validation level OV, valid to 2026-12-29T23:59:59+00:00.
- The infrastructure analysis identified Incapsula CDN/WAF protection and 2 observed edge IPs, with 0 likely origin IPs.

Closing Assessment

The site is suitable for ordinary informational access, with credential or payment activity appropriately limited to services independently confirmed as genuine and expected, using normal merchant-identity and payment-protection checks.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	55/100
Identity verification confidence	60%

- Identity verified on page

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of bocongan.gov.vn.

- The request stayed on bocongan.gov.vn. It was not redirected to another domain. [CLEAR](#)
- It is hosted on INCAPSULA, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about bocongan.gov.vn at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
