

Is borislavborissov.eu safe? TrustSniffer's moderate-trust assessment: 50/100

borislavborissov.eu

Verdict

50

OUT OF 100

MODERATE TRUST

borislavborissov.eu is moderately trusted.

Most signals looked ordinary, and some evidence was missing. Read the checks below before you pay or hand over personal details.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-22 by automated analysis. Classification confidence 55%.

What this site appears to be

Bulgarian personal blog page (WordPress) showing a holiday greeting post and site navigation. No requests for payments, credentials, or sensitive actions detected.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

What borislavborissov.eu served when TrustSniffer captured it on 2026-08-22. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2009.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

This website is a Bulgarian-language personal WordPress blog attributed to Borislav Borisov, presenting holiday posts, personal publishing categories, site navigation, and an archive of older entries; its apparent purpose is non-transactional personal or publisher content rather than financial, commercial, or credential-collection activity.

Scam/Impersonation Risk

Contradictions were observed. The reviewed homepage is benign in presentation and shows no login, payment, wallet, or sensitive-data request, but external reputation telemetry records a confirmed blacklist status together with multiple malicious detections. That conflict creates a material risk for sensitive interaction even though the visible page content does not itself display an overt abuse workflow. The domain has a substantial historical presence and stable content continuity, which is relevant positive context, but those characteristics do not neutralize the current external reputation signal.

EVIDENCE

- External reputation telemetry recorded 3 malicious detections and 1 suspicious detection, together with confirmed blacklist status.
- The homepage is a Bulgarian personal blog attributed to Borislav Borisov and contains a holiday greeting post dated 25 December 2010.
- Domain continuity dates to 2009; the authoritative domain-age estimate is 16.67898699520876 years.
- The archive record contains 113 snapshots spanning 2009–2025, covering 17 years.

Regulatory Verification Notes

The site's apparent personal-blog model does not establish a regulated financial service, and the reviewed pages provide no clear licensing or formal legal-entity disclosure. The real-world operator identity remains unverified, so the author attribution should not be treated as independently established ownership. This is a regulatory and identity-transparency gap rather than, by itself, proof of fraud. The domain is registered through Jump.bg Ltd., while its transport security is provided by a valid domain-validated certificate; these are infrastructure and registration facts, not evidence of licensing or operator legitimacy.

EVIDENCE

- The homepage identifies the author as “Борислав Борисов” and shows WordPress-powered blog navigation, but no license authority or license number is presented in the reviewed content.
- The domain registrar is Jump.bg Ltd.
- The site is hosted on AS8860 (DELTA-BG-AS - Delta HighTech Ltd., BG).
- TLS is issued by YR1 at DV validation level and is valid to 2026-11-16T07:22:01+00:00.

What to Verify Next

Before any sensitive interaction, an independent source should confirm who controls the domain and whether the current blacklist status reflects a mistaken classification, historical compromise, or an unresolved issue. Any future page that introduces authentication, payment, financial solicitation, or data-collection functionality should be assessed separately from the currently observed blog content. Official contact channels should be confirmed through an independently sourced route rather than relying solely on information presented on the site.

EVIDENCE

- The reviewed homepage contains one search form and no sensitive form, login form, or external password-submission destination.
- Behavioral testing recorded 2 successful runs, with 0 external XHR or fetch requests and 0 hidden forms.
- The site was served successfully with HTTP 200 responses during the reviewed runs.

Summary Verdict

The overall posture is **moderate trust with elevated sensitive-interaction risk**. The site appears to be a long-running personal publishing property with benign observed behavior, but the unresolved external reputation

contradiction and unverified operator identity prevent it from being treated as suitable for credentials, account access, or financial activity.

Infrastructure Integrity

The site resolves directly to a likely origin address, with no CDN or WAF detected and no edge-IP layer identified. This reduces the mitigating value normally provided by protective edge infrastructure; the hosting arrangement itself should therefore be regarded as neutral technical context rather than proof of legitimacy.

Closing Assessment

Use should remain limited to passive reading unless the operator identity and external reputation conflict have been independently resolved; login, credential submission, and financial activity should not be undertaken on the basis of the present evidence.

Written analysis generated 2026-08-22 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine.

01 Governance Risk

- The public registration record for this domain is incomplete.
Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about borislavborissov.eu at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
