Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

Brasil Mineral is an established Portuguese-language trade publication serving Brazil's mining and minerals sector through current news, analysis, videos, magazine editions, newsletters, advertising, and clearly identified sponsored industry content.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, malicious behavior, or other scam-related signals were observed. The long-established domain is registered to Signus Editora Ltda, consistent with an editorial business, while the homepage presents substantial sector-specific reporting rather than credential harvesting or deceptive financial solicitation. Automated interaction testing found no hidden or sensitive forms, unauthorized external destinations, cloaking, wallet activity, clipboard manipulation, or suspicious scripts.

- The domain registration record identifies Signus Editora Ltda as owner and records registration on 19 November 1997 (~28.72 years old), with expiration on 19 November 2030.
- The homepage identifies Brasil Mineral as a mining-industry news publication and displays dated reporting, magazine editions, videos, advertising options, and sponsored-content labels.
- Homepage behavior testing completed two successful interaction runs without hidden forms, password forms, cloaking, wallet-provider activity, clipboard hijacking, or suspicious inline scripts.
- External reputation checks recorded no malicious or suspicious classifications, no threat-list finding, no reported abuse, and a global traffic rank of 682,345 within the top one million domains.

Regulatory Verification Notes

The observed business model is publishing and advertising rather than the provision of financial, brokerage, investment, or other regulated services. Accordingly, the absence of a licensing claim is not anomalous for the activity presented. Corporate attribution in the registration record, a São Paulo business address, domain-based contact information, and clearly marked sponsored material provide coherent identity and commercial-disclosure signals. No adverse broker-related match was identified; this is contextual reputation information rather than a regulatory determination.

- The homepage describes a trade-media offering focused on mining companies, metals, safety, regulation, ESG, critical minerals, equipment, and corporate results.
- The homepage distinguishes commercial material with "Conteúdo apresentado por" and provides an advertising pathway, supporting a transparent advertising-funded model.

- The site is served from AS13335 (Cloudflare, Inc., US).
- The site’s transport encryption uses a WE1-issued domain-validated certificate, valid until 18 October 2026.

What to Verify Next

Enterprise onboarding should confirm that commercial correspondence, advertising orders, subscription arrangements, and payment instructions originate through independently validated Brasil Mineral channels. Organizations relying on published material for investment, compliance, or procurement decisions should corroborate material corporate and regulatory claims against primary filings and distinguish editorial reporting from sponsored content. Newsletter or subscription users should review the applicable privacy and data-handling terms before enrollment.

- The homepage publishes advertising invitations and sponsored industry material, making independent confirmation of commercial instructions an appropriate anti-fraud control.
- The homepage reports company performance, production figures, regulatory distributions, employment opportunities, and cross-border industry partnerships that may influence business decisions.
- The homepage offers newsletter engagement and magazine content, creating a legitimate need to review the terms governing subscriber information.
- Sponsored articles are visibly labelled on the homepage, enabling users to separate paid presentations from general editorial coverage.

Summary Verdict

The website is legitimate, established, and trustworthy. Its coherent publishing identity, mature domain provenance, substantial editorial operation, clean external reputation, and benign observed behavior converge on a high-confidence assessment suitable for normal use.

Infrastructure Integrity

Cloudflare provides the site’s CDN and WAF layer, with all observed IPv4 and IPv6 addresses operating as Cloudflare edge nodes. The origin server was therefore shielded from direct observation, which is a standard protective configuration that reduces direct infrastructure exposure but is not independently proof of legitimacy.

Closing Assessment

Normal interaction—including browsing, newsletter engagement, account login where offered, and standard commercial use—is appropriate, subject to routine organizational controls for payments and consequential business decisions.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of brasilmineral.com.br.

- The request stayed on brasilmineral.com.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2030-11-19. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about brasilmineral.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
