

Is breezeclient.com a scam? TrustSniffer's high-risk assessment: 0/100

breezeclient.com

Verdict

0

OUT OF 100

CRITICAL RISK

breezeclient.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-09-22 by automated analysis. Classification confidence 55%.

What this site appears to be

Landing page offering a free cracked Minecraft utility client (Breeze Client) with modules for cheating and claims of being 'undetectable'; provides downloads and installation instructions. Content promotes illicit/unauthorized software and poses security/malware risks.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The page as captured

https://breezeclient.com/

What breezeclient.com served when TrustSniffer captured it on 2026-09-22. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- Public web-archive history exists since 2021.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

Breeze Client is a software-download landing page presenting a free, cracked Minecraft utility client with cheat modules, anti-cheat bypass claims, live demonstrations, and installation instructions. Its apparent business model is the distribution of modified gaming software, although the site does not explain how that distribution is governed or monetized.

Scam/Impersonation Risk

The site presents multiple material risk indicators. Its homepage promotes a “fully unlocked” cracked client described as “undetectable,” including AimAssist, BackTrack, Velocity, KillAura, Scaffold, Speed, and Flight modules, while also claiming to bypass major anti-cheat systems. These claims are unsupported by the page evidence and are paired with browser behavior that prompts a JAR file download and distributes cracked software, creating a credible malware and unauthorized-software risk. External reputation checks also recorded a confirmed blacklist result and detections from Fortinet and other security sources. No brand impersonation or

conflicting legal-entity identity was identified, but the confirmed blacklist status and the nature of the downloadable offering make sensitive interaction inappropriate.

EVIDENCE

- The homepage advertises “Breeze Client — Free Cracked Minecraft Utility Client,” “undetectable” operation, anti-cheat bypasses, and named cheat modules including AimAssist, BackTrack, KillAura, Scaffold, Speed, and Flight.
- The homepage behavior analysis recorded prompts for JAR-file downloads, distribution of cracked software, and potential malware risk.
- External security telemetry recorded a confirmed blacklist result, one malicious detection, three suspicious detections, and a Fortinet threat flag.
- Historical telemetry records a domain age of 4.815879534565366 years; the registration record separately lists creation date 2026-04-19T21:27:28Z and an age of 0.42 years.

Regulatory Verification Notes

The site’s apparent legitimacy is not independently connected to a verified real-world operator. The homepage does not present a license claim, license number, or licensing authority, and the business model leaves the legal and operational basis for distributing modified software unclear. These are verification and disclosure gaps rather than a separate identity contradiction. The available broker-context check produced no match, but that contextual result does not establish authorization or legitimacy.

EVIDENCE

- The homepage identifies the offering as a cracked Minecraft client but provides no license authority or license number.
- The homepage presents no visible corporate, ownership, or governance disclosure sufficient to independently verify the operator.
- The registration record lists Web Commerce Communications Limited dba WebNic.cc as registrar and gives an expiration date of 2027-04-19T21:27:28Z.
- Archive telemetry records 0 snapshots, with first seen 2021-11-28T10:39:28Z, last seen 2021-11-28T10:39:28Z, and 1 year tracked.

What to Verify Next

Before any interaction beyond passive review, an enterprise should establish the operator’s identity through an independent source and confirm whether distribution of the software is authorized by the relevant rights holder. Any downloaded file should be assessed in an isolated malware-analysis environment rather than opened on a production endpoint, and official support or contact channels should be confirmed through an independent route.

EVIDENCE

- The homepage’s stated purpose is distribution of modified software rather than a conventional, clearly governed commercial service.
- The download workflow involves a JAR file and therefore warrants independent file provenance and malware analysis before execution.

Summary Verdict

The website has a critical trust posture and presents a substantial risk for downloading or executing software from the site. The available evidence is consistent with an unverified, high-risk distribution operation rather than a trustworthy software provider, and the confirmed external threat signal is decisive.

Infrastructure Integrity

The site is delivered through Cloudflare CDN/WAF infrastructure, which provides a mitigating layer against direct exposure but does not validate the site’s content or operator. The observed address is an edge address, and the origin server was not observable in this analysis.

EVIDENCE

- Served from AS214351, identified as FEMOIT - FEMO IT SOLUTIONS LIMITED, GB; the observed address is 196.251.107.204 in Seychelles.
- TLS uses a DV certificate issued by YR2, valid to 2026-12-20T14:07:19+00:00.
- Cloudflare was identified as the CDN/WAF provider, with 1 observed edge IP and 0 origin candidates.

Closing Assessment

The proportionate control is to limit activity to passive review, avoid downloading or executing files, and prevent credential or other sensitive interactions with the site. Further engagement should occur only after independent operator and software-provenance checks have been completed.

Written analysis generated 2026-09-22 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine.

01 Governance Risk

- The public registration record for this domain is incomplete.
Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%
• No on-site identity signals detected	

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of breezeclient.com.

- The request stayed on breezeclient.com. It was not redirected to another domain. CLEAR
- Registration is published under Web Commerce Communications Limited dba WebNic.cc. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-04-19. NOTED
- The earliest public archive of this site is from 2021-11-28. CLEAR
- It is hosted on FEMOIT, from a server in SC. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about breezeclient.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
