Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2016.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Business Post Nigeria is a Nigerian news and media portal presenting business, banking, economic, political, world, sports, entertainment, education, jobs, and opinion coverage. Its apparent model is online journalism supported by advertising, sponsored or syndicated content, and audience engagement, without an investment, payment, or sensitive-data collection function evident in the supplied pages.

Scam/Impersonation Risk

No contradictions were observed across the supplied content and technical signals. The homepage presents ordinary editorial listings, with no phishing indicators, credential harvesting, deceptive financial activity, brand impersonation, or high-risk transaction mechanics. External reputation checks found no malicious or suspicious detections, supporting the conclusion that the site is a legitimate established publisher.

- Homepage: broad editorial navigation and current Nigerian business, economy, banking, and general news listings.
- Homepage behavior: no login form, hidden form, password submission, wallet connection, clipboard manipulation, or cloaking detected.
- Domain history: registered 2016 and approximately 10.02 years old.
- Web archive: 503 snapshots spanning 2016–2026, covering 11 tracked years.

Regulatory Verification Notes

The site presents itself as a media publisher rather than a financial or payment service, so the supplied content does not create an evident licensing requirement for its core activity. The available navigation includes About Us and Contact Us, but the supplied material does not provide a clear corporate-registration or regulatory disclosure; this is a transparency item for confirmation, not an identity contradiction. The domain is registered through QServers.ng, and its technical configuration shows valid mainstream transport encryption.

- Domain registration: created 2016-07-28 and expiring 2027-07-28; registrar recorded as QServers.ng.
- Hosting: served from AS13335, Cloudflare, Inc.
- TLS certificate: issued by WE1, DV validation, valid through 2026-09-15.
- Authority: page-authority assessment recorded in the mid band.

What to Verify Next

For formal business engagement, confirm the publisher’s legal entity and any applicable registration through the relevant Nigerian corporate or media registry. Where commercial sponsorship or regulated financial reporting is material, validate the stated organization and editorial contacts through an independent channel.

- Homepage: identifies the publication as Business Post Nigeria and exposes About Us and Contact Us navigation.
- Site model: supplied content is categorized as news/media and contains no financial-service or payment workflow.
- Contact and identity pages: available for independent confirmation of publisher details.

Summary Verdict

Business Post Nigeria presents as a legitimate, established, high-trust news publisher with a coherent purpose and no observed scam or impersonation indicators. Normal interaction and standard use are appropriate.

Infrastructure Integrity

Cloudflare CDN/WAF protection is present, and all observed addresses were CDN edge servers rather than identified origin candidates. This reduces direct exposure of the publishing infrastructure and is a mitigating security characteristic, not proof of legitimacy by itself.

- CDN/WAF: Cloudflare protection detected across four observed edge addresses.
- Origin posture: no origin-server candidate was identified among the observed addresses.

Closing Assessment

Standard browsing, account interaction where applicable, and ordinary engagement with the publication are appropriate.

Written analysis generated 2026-08-02 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

About this assessment

A trust score summarises the evidence TrustSniffer could collect about businesspost.ng at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
