

Is catalogmineralov.ru legit? TrustSniffer's high-trust assessment: 80/100

catalogmineralov.ru

Verdict

80
OUT OF 100
HIGH TRUST

catalogmineralov.ru appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-07-31 by automated analysis. Classification confidence 75%.

What this site appears to be

An established Russian-language catalog and editorial portal covering minerals, gemstones, deposits, geology news, articles, collections, shops, tenders, and a forum. The page is predominantly informational and does not request payment or sensitive data, but conspicuous unrelated casino and commercial links suggest SEO spam, paid-link insertion, or compromised editorial integrity.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2005.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an established Russian-language mineralogy and geology information portal offering mineral and gemstone catalogues, geological news, deposit information, collections, shop directories, tenders, community contributions, and a forum, with an apparently advertising-supported editorial and directory model.

Scam/Impersonation Risk

No phishing, brand impersonation, conflicting legal identities, or other identity contradictions were observed. The long-established domain, extensive historical record, established traffic footprint, and clean external threat reputation strongly support legitimacy. Unrelated casino and commercial promotions embedded among geological content indicate weak advertising or editorial controls—potentially paid-link or SEO-spam placement—but do not outweigh the consistent identity and provenance evidence. Automated interaction testing found no cloaking, hidden forms, credential forwarding, clipboard interference, or cryptocurrency-wallet behavior.

- The domain registration record shows registration on 1 June 2005 (~21.18 years old), with registration through BEGET-RU and expiry on 1 June 2027.
- The domain's archive contains 655 snapshots spanning 2005–2026 (22 years tracked), with no suspicious repurposing or established change of business category.
- The homepage presents substantial mineralogy and geology content but also contains unrelated gambling and commercial promotions among topical material.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no search-browser security hit, no reported hosting-IP abuse, and an established global traffic rank of 464,729.

Regulatory Verification Notes

The observed service is an informational publishing, catalogue, directory, and community platform rather than a financial intermediary, broker, investment service, or cryptocurrency operation. No regulated financial activity or licensing claim appears in the supplied homepage evidence; consequently, the absence of a financial licence is not itself a material legitimacy concern for the apparent business model. No matching broker profile was identified in the supplied third-party broker-intelligence context, but that result is reputational context rather than a legal or regulatory determination.

- The homepage categorizes the service through mineral catalogues, geology reporting, deposit information, collections, shops, tenders, and forum participation.
- The homepage contains no payment or sensitive-data form and presents no cryptocurrency assets, wallet connection, investment product, or brokerage service.

- The site's observed monetization model consists principally of advertising placements and links to mineral-related shops.
- The supplied third-party broker dataset contains no matched broker record for the site.

What to Verify Next

Institutional users considering advertising, directory placement, commercial submissions, or procurement engagement should confirm the contracting entity and commercial terms from the relevant transaction documents. The official contact route should be independently confirmed before establishing a commercial relationship, and outbound promotional links should be inspected for destination relevance because their subject matter is not consistently aligned with the portal's editorial focus. Routine browsing, account login, and standard site use are otherwise appropriate.

- The homepage exposes a personal-account area and community-oriented functions, establishing the relevance of confirming the official account and contact workflow.
- The shop, tender, and advertising-oriented sections indicate that some engagements may create contractual or payment obligations beyond ordinary content access.
- The homepage's unrelated outbound promotions provide a specific basis for checking destinations before following commercially oriented links.

Summary Verdict

The website is legitimate, established, and trustworthy, with strong convergence between its long-running identity, substantive editorial footprint, historical continuity, clean threat reputation, and stable public use. The observed concerns relate to editorial advertising quality rather than impersonation, phishing, or malicious operation.

Infrastructure Integrity

The site is served directly from Russian hosting infrastructure without a detected CDN or WAF layer; this is a conventional hosting posture and is neither independent proof of legitimacy nor a material adverse signal in the supplied evidence. No likely origin candidates were separately identified, and the infrastructure assessment remained normalized as trustworthy despite an unconfirmed DNS-change heuristic.

- The hosting infrastructure serves the site from AS25532 (MASTERHOST-AS — LLC MASTERHOST, RU), with the confirmed server address located in Russia.
- The site's transport encryption uses a valid DV TLS certificate issued by YR2, valid through 6 September 2026.
- Infrastructure resolution identified eight addresses, no CDN edge addresses, and no separately classified origin candidates.

Closing Assessment

Prospective users may proceed with normal interaction, including account login and standard use; organizations entering a commercial arrangement should apply their ordinary counterparty and destination-link validation controls.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of catalogmineralov.ru.

- The request stayed on catalogmineralov.ru. It was not redirected to another domain. [CLEAR](#)
- Registration is published under BEGET-RU. [CLEAR](#)
- DNS for this domain is served by ru., across 3 name servers. [NOTED](#)
- The registration is paid up to 2027-06-01. [NOTED](#)
- The earliest public archive of this site is from 2005-12-31. [CLEAR](#)
- It is hosted on MASTERHOST-AS, from a server in RU. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about catalogmineralov.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
