Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2018.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an established South African public-health service portal supporting Synchronised National Communication in Health, with authorized-user access, chronic-medicine distribution information, operational notices, manuals, access-request materials, and helpdesk support for public-sector healthcare processes.

Scam/Impersonation Risk

No phishing, brand impersonation, conflicting legal identities, deceptive financial solicitation, or other identity contradictions were observed. The login and password-recovery functions are consistent with the portal's stated operational purpose, and behavioral testing found no hidden credential forms, untrusted form destinations, cloaking, clipboard interference, or suspicious scripts. Its long-established domain, stable public-health content, and clean external reputation collectively support authenticity.

- The homepage identifies the service as “Synchronised National Communication in Health” and explains its role in chronic-medicine access, repeat prescriptions, ART, non-communicable diseases, and public-sector healthcare capacity.
- The domain was registered on 28 March 2016 and is approximately 10.36 years old; registration is maintained through xneelo (Pty) Ltd and currently expires on 28 March 2027.
- The web archive contains 1 snapshot, captured on 11 August 2018, representing 1 tracked year; the limited capture depth is incomplete archival coverage rather than evidence of recent creation or repurposing.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no reported abuse, and an established top-one-million traffic footprint.

Regulatory Verification Notes

The available pages present SyNCH as an operational public-health portal rather than a financial, investment, brokerage, or commercial service. The supplied content does not establish a specific administering legal entity, statutory mandate, or formal governmental affiliation, and no licensing claim or number is presented; in this context, those are disclosure-verification matters rather than evidence of deception. No adverse broker-related match was identified, although broker intelligence has limited relevance to this service model.

- The homepage describes pressures on South African primary healthcare facilities and the management of repeat chronic prescriptions, providing substantive context consistent with the portal's stated function.
- The documents area is described as providing operational materials and user manuals, while the site also offers access-request forms and helpdesk details.

- The site uses a WE1-issued domain-validated TLS certificate, valid until 12 September 2026.
- The observed login form submits to a trusted destination, and no password form was found posting credentials to an external domain.

What to Verify Next

Institutional onboarding or formal reliance should include confirmation of the portal’s administering organization and mandate through the relevant South African public-health authority. Prospective organizational users should also confirm access-request procedures and official helpdesk channels through independently obtained institutional contact details, while access administrators should ensure that accounts are provisioned through approved internal workflows.

- The contact area provides direct helpdesk details intended to support operational users.
- The site offers login, lost-password recovery, password reset, and access-request functions, making organizational account-provisioning controls relevant.
- The documents area supplies manuals and operational notices that can be compared with independently obtained program guidance.

Summary Verdict

The website is legitimate, established, and trustworthy, with a coherent public-service identity and no observed contradictions or deceptive behavior. The convergence of mature provenance, substantive operational content, stable behavior, and clean reputation evidence supports normal interaction, including account login and standard authorized use.

Infrastructure Integrity

The website is protected by Cloudflare’s CDN and WAF, with all four observed addresses resolving to edge infrastructure and no origin-server candidate exposed. This reduces direct origin exposure and provides a meaningful infrastructure safeguard, although protective hosting is appropriately treated as mitigation rather than independent proof of legitimacy.

- The site is served from AS13335 (Cloudflare, Inc., US).
- Four Cloudflare edge addresses were observed: two IPv4 and two IPv6 addresses; no likely origin address was identified.

Closing Assessment

Prospective users may use the portal normally, including its authenticated functions, while organizations should apply their customary account-authorization and institutional due-diligence procedures.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100

Identity verification confidence	50%
----------------------------------	-----

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of ccmdd.org.za.

- The request stayed on ccmdd.org.za. It was not redirected to another domain. CLEAR
- Registration is published under xneelo (Pty) Ltd. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-03-28. NOTED
- The earliest public archive of this site is from 2018-08-11. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about ccmdd.org.za at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
