Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2018.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Chainstack is a blockchain infrastructure SaaS platform offering managed, dedicated, global, and self-hosted nodes, RPC APIs, archive data, and developer tooling across more than 70 blockchain networks. Its apparent business model is subscription-based infrastructure services, with free developer access and paid growth, professional, business, and enterprise plans.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent B2B infrastructure model rather than an investment solicitation, and the stated offerings—managed nodes, RPC access, archive data, developer tools, and enterprise services—are consistent with that model. The observed login pathway showed no hidden or externally redirected sensitive form, and behavioral testing found no cloaking, wallet-drainer activity, clipboard manipulation, or phishing indicators. The site's historical continuity and clean external reputation further support an established identity.

- The homepage describes blockchain infrastructure products, pricing tiers, documentation, enterprise services, and developer support.
- Behavioral testing recorded no hidden forms, external password forms, wallet-provider activity, or cloaking.
- The domain was registered in 2014 and is 11.68 years old.
- Web archives contain 463 snapshots from 2018-07-05 through 2026-07-25, spanning 9 years tracked.

Regulatory Verification Notes

The site's identity-facing content provides pricing, enterprise services, customer testimonials, security certifications, support channels, and company addresses. No financial-services license or registration number is evidenced in the supplied material; for a blockchain infrastructure provider, this is a transparency and applicability question rather than an indication of deception. The available third-party reputational context contains no broker match, while the site's technical identity is consistent across the supplied evidence.

- The site is hosted on AS13335, CLOUDFLARENET - Cloudflare, Inc., US.
- TLS uses issuer YE1 with DV validation and is valid until 2026-10-12T15:46:44+00:00; 71 days remained at collection.
- The homepage exposes Pricing, Documentation, enterprise services, and support pathways.
- No broker-dataset match was recorded.

What to Verify Next

For institutional procurement, confirm the service scope, contracting entity, applicable data-processing terms, and any regulatory obligations associated with the intended deployment. Where the engagement involves a regulated activity rather than infrastructure provision, confirm the relevant authorization independently through the applicable registry.

- The homepage provides distinct developer, professional, business, and enterprise service pathways.
- Documentation and support pathways are available for technical and operational review.
- The site presents security certifications and enterprise-service information for procurement assessment.

Summary Verdict

The website has a high-trust posture consistent with a legitimate, established technology provider. Its identity, business model, historical continuity, technical operation, and external reputation converge without observed impersonation, phishing, or other contradictory signals.

Infrastructure Integrity

The site is protected by a Cloudflare CDN/WAF layer; all four observed addresses were CDN edge servers, and no origin candidate was observed. This reduces direct origin exposure and is a mitigating infrastructure control, not independent proof of legitimacy.

Closing Assessment

Normal interaction, including account login and standard account use, is appropriate, subject to ordinary institutional procurement and contractual due diligence.

Written analysis generated 2026-08-01 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	73/100
Identity verification confidence	37%

- Trusted social count=1

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of chainstack.com.

- The request stayed on chainstack.com. It was not redirected to another domain. CLEAR
- Registration is published under Cloudflare, Inc.. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2026-11-26. NOTED

- The earliest public archive of this site is from 2018-07-05. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about chainstack.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
