

Is cloud.com legit? TrustSniffer's high-trust assessment: 90/100

cloud.com

Verdict

90

OUT OF 100

HIGH TRUST

cloud.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 75%.

What this site appears to be

Official corporate site for Cloud Software Group describing its portfolio of enterprise software brands, product capabilities (security, integration, analytics, AI), industry use cases, partner/investor information, and careers. Content is marketing and informational; no financial investment solicitations or credential requests detected.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1996.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This is the corporate website for Cloud Software Group, presenting an enterprise software portfolio that includes Citrix, TIBCO, Spotfire, ibi, Arctera, Enterprise Vault, InfoScale, ON EBX, and DataSynapse. Its apparent purpose is to explain the group's enterprise technology capabilities, industry applications, partner and investor relationships, and career opportunities rather than solicit consumer investments or collect credentials.

Scam/Impersonation Risk

No contradictions were observed across the supplied evidence: there is no phishing, impersonation, blacklist, or malicious-content indication. The homepage presents coherent corporate and business information, with no investment solicitation, cryptocurrency activity, credential-harvesting workflow, or sensitive form detected. Its clean external reputation and top-tier global traffic footprint are consistent with an established public-facing enterprise site, although those signals do not independently prove the real-world operator's identity.

EVIDENCE

- Homepage: describes Cloud Software Group as the parent organization of multiple enterprise software brands and presents enterprise software capabilities and industry use cases.
- Homepage interaction analysis: no login form, hidden sensitive form, password-external form, wallet connection, or cloaking behavior was detected.
- External reputation evidence: malicious detections were recorded as 0, suspicious detections as 0, and blacklist status as false; the site's traffic rank was 1874.

Regulatory Verification Notes

The site's stated business model is enterprise software licensing, support, professional services, partner engagement, investor relations, and careers, not a financial product or investment service. The available corporate content identifies Cloud Software Group and its brand portfolio, but the real-world operator identity is not independently verified; the on-site presentation should therefore be treated as evidence-consistent rather than conclusive proof of corporate identity. No regulated financial license claim is presented, which is a verification consideration for procurement or contracting but not evidence of a scam in the context of the stated software business.

EVIDENCE

- Registration record: created 2000-12-13, age 25.68 years, expiring 2026-12-13; registrar MarkMonitor, Inc.; organization recorded as Cloud Software Group, Inc.
- Historical web coverage: 1,383 archive snapshots spanning 1996–2026, with 31 years tracked.
- Hosting and transport telemetry: served from AS54113 (FASTLY - Fastly, Inc., US); TLS uses DigiCert Global G2 TLS RSA SHA256 2020 CA1, OV validation, subject organization Cloud Software Group, Inc., valid to 2026-11-12.

What to Verify Next

Before a procurement, contract, credential exchange, or payment interaction, the prospective counterparty should match the legal entity named in the relevant order or agreement against independently sourced corporate records. Contact and investor channels should be validated through an established, offline or independently obtained route, and commercial documentation should be reviewed for renewal, support, termination, refund, and payment-protection provisions. These checks are proportionate to the remaining identity uncertainty and should be completed without treating the site's own corporate claims as sole proof.

EVIDENCE

- About and business content: provides the stated corporate structure and identifies the portfolio brands that should be reconciled with contracting documentation.
- Contact and investor navigation: provides business-facing channels suitable for comparison with independently sourced corporate records.
- Commercial engagement: the site describes enterprise software and partner relationships, making contract terms and counterparty authority the relevant verification points.

Summary Verdict

The overall posture is **high trust and low risk**, with the available evidence consistent with an established, apparently legitimate enterprise website. No scam or impersonation contradiction was identified; the principal qualification is that the real-world operator identity remains independently unverified.

Infrastructure Integrity

The site is protected by Cloudflare CDN/WAF infrastructure and uses Fastly delivery infrastructure, with observed CDN edge addresses and one potential origin candidate. This layered delivery architecture mitigates direct exposure of the service infrastructure, but remains a protective technical control rather than proof of legitimacy.

Closing Assessment

Normal informational use is appropriate, while ordinary independent checks of the contracting entity, commercial terms, and payment protections should precede credential submission or financial engagement.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of cloud.com.

- The request stayed on cloud.com. It was not redirected to another domain. CLEAR
- Registration is published under MarkMonitor, Inc.. CLEAR
- DNS for this domain is served by awsdns-35.org, across 4 name servers. NOTED
- The registration is paid up to 2026-12-13. NOTED
- The earliest public archive of this site is from 1996-12-24. CLEAR
- It is hosted on FASTLY, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about cloud.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a

legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
