

Is cloudns.net legit? TrustSniffer's high-trust assessment: 100/100

cloudns.net

Verdict

100

OUT OF 100

HIGH TRUST

cloudns.net appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not ScamLow Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 55%.

What this site appears to be

ClouDNS marketing/product page describing free and paid DNS hosting services, features (Anycast, DDoS protection, GeoDNS), monitoring and domain registration with pricing and customer testimonials.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

CloudDNS is a DNS infrastructure and domain-services website presenting free and paid DNS hosting, domain registration, SSL certificates, monitoring, and related network-management services through a subscription and service-based business model.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, or other contradictory signals were observed. The homepage presents a coherent commercial service offering, and the available technical and external-reputation evidence is consistent with an established website rather than an abuse-oriented operation. The site's login and signup functionality was assessed as part of a normal service workflow, with no detected hidden forms, credential redirection, wallet-drainer behavior, cloaking, or suspicious script activity.

EVIDENCE

- The domain registration record shows registration on 2009-12-06 and an age of 16.69 years.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and a global traffic rank of 372.
- The homepage is classified as a marketing and product page for DNS hosting, with no listed red flags and no suspected brand-impersonation finding.

Regulatory Verification Notes

The site describes a conventional SaaS and infrastructure-services model: free and paid DNS hosting, Anycast, DDoS-protected DNS, GeoDNS, domain registration, SSL certificates, monitoring, support, and enterprise services. The supplied material contains no license claim or license number, and no independent regulatory authorization was established; this is a disclosure and verification point rather than evidence of a scam. The real-world operator identity remains unverified, so the site's apparent legitimacy should not be treated as proof of a particular legal entity. Its detailed product pages, pricing, testimonials, and support navigation nevertheless provide substantive commercial context, while the registration record identifies Cloud DNS Ltd as registrar.

EVIDENCE

- The homepage lists DNS hosting, domain names, SSL certificates, monitoring, support, and enterprise-oriented services.
- The registration record lists Cloud DNS Ltd as registrar.
- The site's transport encryption uses a DV certificate issued by Sectigo Public Server Authentication CA DV R36, valid through 2026-10-29.
- The homepage contains detailed product and pricing content, customer testimonials, and support or contact navigation.

What to Verify Next

Before credential or payment interactions, independently confirm the legal entity operating the service through the site's company and contact information and a reliable external corporate source. Where a jurisdiction imposes authorization requirements on domain or infrastructure services, confirm the applicable status with the relevant registry. Account users should also review service terms, renewal and cancellation conditions, refund treatment, and available payment protections before committing funds.

EVIDENCE

- The homepage exposes Company, About Us, Contacts, data-center, support, careers, partnership, affiliate, and reseller navigation.
- The service presentation includes paid plans, add-on services, domain purchases, and support or enterprise contracts, making billing and renewal terms relevant to the verification process.
- The site provides both signup and sign-in entry points, making independent confirmation of official account and support channels appropriate before credential submission.

Summary Verdict

The overall posture is high trust and low risk, and the available evidence is consistent with an established, apparently legitimate website. The conclusion is strong on website legitimacy and operational consistency, while the underlying real-world operator identity remains independently unverified.

Infrastructure Integrity

The website uses CDN/WAF protection, which mitigates direct exposure of the hosting environment. Observed infrastructure resolves to Hetzner Online GmbH in Germany, and the origin server was not observable in this analysis; these controls support defensive resilience but do not independently establish operator identity.

EVIDENCE

- Served from AS24940 (HETZNER-AS - Hetzner Online GmbH, DE).
- The observed infrastructure is protected by a CDN/WAF layer, with 8 edge IPs and 0 likely origin IPs identified.
- TLS certificate validation level is DV; issuer is Sectigo Public Server Authentication CA DV R36, valid to 2026-10-29T23:59:59+00:00.

Closing Assessment

The site is suitable for ordinary service evaluation, subject to the standard independent identity, contractual, and payment-protection checks expected before credentials or funds are committed.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of cloudns.net.

- The request stayed on cloudns.net. It was not redirected to another domain. CLEAR
- Registration is published under Cloud DNS Ltd. CLEAR
- DNS for this domain is served by cloudns.net, across 6 name servers. NOTED
- The registration is paid up to 2034-12-06. CLEAR
- It is hosted on HETZNER-AS, from a server in DE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about cloudns.net at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
