

Is codashop.com legit? TrustSniffer's high-trust assessment: 100/100

codashop.com

Verdict

100

OUT OF 100

HIGH TRUST

codashop.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-10 by automated analysis. Classification confidence 75%.

What this site appears to be

International Codashop landing page describing its service as a fast, no-registration-required way to buy game credits across many countries and game publishers.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2008.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Codashop.com is an international digital-commerce website that presents a fast, no-registration-required service for purchasing game credits and online-entertainment top-ups across multiple publishers and regional markets.

Scam/Impersonation Risk

No contradictions were observed, including no phishing, impersonation, blacklist, or conflicting-identity indicators. The landing page describes a conventional retail model, stating that credits are supplied for publishers including Mobile Legends, PUBG Mobile, Free Fire, APEX Legends Mobile, and Call of Duty Mobile, with credits added directly to the customer's game account. Its claims of being one of the largest and most trusted top-up websites are promotional assertions rather than independent proof, but they are not accompanied by page-level fraud indicators. Runtime observations included external requests, external posts, and console errors; these were behavioral irregularities rather than evidence of credential theft or impersonation, and no login form, hidden sensitive form, wallet activity, cloaking, or clipboard manipulation was detected. The clean external reputation assessment and strong global traffic presence further support an apparently established website.

EVIDENCE

- The international landing page describes direct publisher relationships, instant credit delivery, and a no-registration purchase flow, with no red flags identified.
- The domain was registered on 2014-09-15 and is approximately 11.91 years old.
- The web archive records 221 snapshots spanning 2008–2025, covering 18 tracked years.
- The site has a traffic rank of 6779 and is within the top one million globally; external malicious and suspicious findings were both 0, with the major browsing-safety check returning false for malicious status.

Regulatory Verification Notes

The available evidence is consistent with an established, apparently legitimate e-commerce operator, but the real-world operator identity is not independently verified. The reviewed landing-page content does not present a licensing authority or registration number; for a digital top-up retailer, this is a regulatory and disclosure point to clarify rather than evidence of a scam. The site's stated publisher relationships and international availability should therefore be treated as business claims pending confirmation through the relevant publisher or regional

merchant channels. No matching third-party broker-reputation record was returned, although that signal is contextual and is not a licensing determination.

EVIDENCE

- The domain is registered through Amazon Registrar, Inc.; the registrant organization is recorded as “c/o whoisproxy.com.”
- The site is served from AS16509, Amazon.com, Inc., US.
- Transport encryption uses a DV certificate issued by Amazon RSA 2048 M01, valid through 2026-11-05.
- The reviewed page does not state a licensing authority or license number.

What to Verify Next

Before credential or payment interactions, the applicable regional merchant identity should be matched against the publisher’s own authorized-sales information and the relevant corporate or consumer-protection registry. The applicable checkout terms should also be reviewed for refund treatment, delivery failures, dispute handling, and payment-protection options, with support channels confirmed through an independently sourced official channel rather than relying solely on page content.

EVIDENCE

- The international landing page identifies multiple countries and publisher relationships, providing specific regional and commercial claims for independent confirmation.
- The reviewed content describes instant digital delivery but does not establish the applicable refund, dispute, or payment-protection terms.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website with a high-trust, low-risk posture and no observed scam or impersonation contradictions. The principal residual uncertainty concerns independent confirmation of the real-world operator rather than indications of malicious website behavior.

Infrastructure Integrity

The site uses Amazon infrastructure with AWS CDN/WAF protection, which is a meaningful mitigating control for edge exposure and service delivery. Observed infrastructure includes CDN edge servers and a potential origin candidate; this describes the hosting architecture, not proof of the operator’s legitimacy.

EVIDENCE

- AWS CDN/WAF protection was observed.
- The infrastructure record contains 3 CDN edge IPs and 1 potential origin candidate.
- The observed hosting country is the US, and the infrastructure provider is Amazon.com, Inc.

Closing Assessment

Ordinary use is proportionate to the available evidence, subject to routine independent merchant-identity, refund-policy, and payment-protection checks before submitting credentials or payment details.

Written analysis generated 2026-08-10 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of codashop.com.

- The request stayed on codashop.com. It was not redirected to another domain. CLEAR
- Registration is published under Amazon Registrar, Inc.. CLEAR
- DNS for this domain is served by awsdns-60.org, across 4 name servers. NOTED
- The registration is paid up to 2026-09-15. NOTED
- The earliest public archive of this site is from 2008-11-11. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about codashop.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
