

Is coinglass.com legit? TrustSniffer's high-trust assessment: 100/100

coinglass.com

Verdict

100

OUT OF 100

HIGH TRUST

coinglass.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-03 by automated analysis. Classification confidence 65%.

What this site appears to be

CoinGlass is a data-heavy financial analytics homepage presenting cryptocurrency derivatives, spot markets, stocks, funding rates, open interest, liquidations, rankings, heatmaps, and Bitcoin ETF flow data. It offers an API, application, charts, alerts, learning resources, account login, policy pages, and community links without visibly requesting deposits, wallet secrets, payments, or sensitive credentials on this page.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2011.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

CoinGlass is an established financial-data and analytics website that presents cryptocurrency derivatives, spot-market, stock, liquidity, liquidation, order-flow, and Bitcoin ETF information through dashboards, charts, alerts, an API, and a mobile application, with an apparent SaaS-oriented business model rather than an investment-deposit proposition.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or adverse threat-reputation findings were observed. The homepage provides a content-rich market-data service without requesting deposits, wallet secrets, or payments, while controlled interaction produced no hidden forms, credential redirection, wallet access, clipboard manipulation, cloaking, or suspicious scripts. Its extensive historical record and established global traffic footprint further support continuity rather than opportunistic impersonation.

- The homepage identifies the service as a crypto-market analytics dashboard and presents market data, charts, alerts, and research resources without a sensitive submission form.
- Interactive testing of the homepage found 0 hidden forms, 0 external password forms, 0 wallet-connect events, 0 wallet-drainer events, 0 suspicious inline scripts, and no cloaking.
- External reputation checks recorded 0 malicious and 0 suspicious classifications, no safe-browsing detection, no reported infrastructure abuse, and a global traffic rank of 12,530.
- The domain archive contains 659 snapshots spanning 2011-02-08 to 2026-07-26, covering 16 tracked years, with no established evidence of suspicious repurposing or semantic drift.

Regulatory Verification Notes

The reviewed homepage functions as an analytics and software service and does not visibly claim to be a licensed broker, exchange, custodian, or investment manager. Although policy pages are linked, the supplied page evidence does not establish an on-page license number or regulatory authority. For this business model, that is a limited disclosure-verification point rather than evidence of fraud or illegitimacy; the site's mature registration, reputable registrar, valid transport security, and substantial audience support an established commercial identity.

- The homepage offers analytics, API access, application downloads, charts, alerts, and learning resources, and does not visibly solicit funds for promised returns.
- WHOIS records show registration on 2017-05-16 (~9.22 years old) through Amazon Registrar, Inc., with expiration on 2035-05-16.

- The site is served from AS16509 (AMAZON-02 — Amazon.com, Inc., US).
- The site’s transport encryption uses a DV TLS certificate issued by Amazon RSA 2048 M04, valid through 2026-12-28.

What to Verify Next

Institutional onboarding should confirm the contracting entity and applicable terms directly from the current legal documents, then determine whether any purchased API, subscription, or data service creates jurisdiction-specific market-data obligations. The official application, API documentation, and account-recovery channels should be matched to the primary domain before enterprise deployment, and operational teams should validate data provenance and service-level commitments appropriate to their intended reliance.

- The homepage exposes account-login, API, application-download, cookie-policy, and other policy navigation relevant to onboarding review.
- The homepage presents derivatives, funding-rate, open-interest, liquidation, order-depth, and ETF-flow datasets whose methodology and permitted use may matter for institutional workflows.
- The site publishes community presences on X and Telegram, providing additional channels whose authenticity should be matched to references on the primary website.

Summary Verdict

CoinGlass presents as a legitimate, established, and trustworthy financial-analytics website. Its identity continuity, clean external reputation, substantive service offering, mature audience footprint, and benign observed behavior converge strongly, with no contradictory risk signals identified.

Infrastructure Integrity

The site operates on mainstream Amazon cloud infrastructure with valid encrypted transport. The observed hosting configuration provides a conventional, professionally managed delivery posture; this mitigates routine availability and transport risks but is not, by itself, proof of legitimacy.

Closing Assessment

Normal interaction, including account login and standard use, is appropriate; enterprise adoption should proceed through ordinary vendor-onboarding, contractual, and data-governance controls.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	55/100
Identity verification confidence	60%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of coinglass.com.

- The request stayed on coinglass.com. It was not redirected to another domain. CLEAR
- Registration is published under Amazon Registrar, Inc.. CLEAR
- DNS for this domain is served by awsdns-36.org, across 4 name servers. NOTED
- The registration is paid up to 2035-05-16. CLEAR
- The earliest public archive of this site is from 2011-02-08. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about coinglass.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
