Summary Verdict

Normal interaction, including account login where offered and standard site use, is appropriate.

Infrastructure Integrity

Cloudflare CDN/WAF protection is present, and all observed addresses are CDN edge infrastructure rather than exposed origin addresses. This provides a meaningful protective layer for availability and network exposure, while remaining a mitigating control rather than proof of legitimacy.

Closing Assessment

About this assessment

A trust score summarises the evidence TrustSniffer could collect about commonwealthfund.org at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
