- Public web-archive history exists since 2004.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Coremail is a corporate product website for enterprise email infrastructure, presenting email platforms, AI-enabled mail-security gateways, archival and delivery systems, industry solutions, deployment services, trials, and business support for organizational customers.

Scam/Impersonation Risk

No contradictions were observed: the available evidence identifies no phishing, impersonation, blacklist, or malicious-content finding. The homepage presents a coherent business model centred on enterprise email systems, AI security gateways, email archiving, delivery, and paid support rather than a deceptive consumer investment or payment scheme. Its marketing includes claims such as being trusted by “1 billion users” and achieving a 99.8% spam-filtering accuracy rate; these are site claims rather than independently verified proof, but they are consistent with the stated corporate product model. Limited behavioural anomalies, including non-whitelisted outbound posts and console errors, were observed without hidden forms, credential exfiltration, wallet activity, cloaking, or other abuse patterns; they therefore do not establish an impersonation or scam concern.

EVIDENCE

- The homepage identifies Coremail products including XT6, enterprise email, CACTER AI mail security gateway, archival systems, delivery systems, and anti-phishing services.
- The homepage advertises “1 billion users” and a 99.8% spam-filtering accuracy rate as marketing claims.
- Domain registration records show registration in 2003, with an age of 23.42 years.
- Archive records contain 860 snapshots from 2004 through 2026, spanning 23 tracked years.

Regulatory Verification Notes

The site appears to operate as an enterprise technology vendor rather than presenting itself as a regulated financial service. Its pages include company information, product material, customer-support channels, industry solutions, and trial or service offerings, but the supplied content does not provide a license number or regulatory authorization. This is a disclosure point for ordinary commercial due diligence, not evidence of a scam. The real-world operator identity remains independently unverified, so the site's apparent legitimacy should not be treated as conclusive proof of the contracting entity. Positive evidence is nevertheless substantial: the domain is long-established, the historical record is substantial and category-consistent, external reputation checks are clean,

and the site has an established global traffic footprint. Registration is through 北京新网数码信息技术有限公司, while the recorded owner is 广东盈世计算机科技有限公司.

EVIDENCE

- The hosting record identifies AS45062, Netease-Network - NetEase Building No.16 Ke Yun Road,, CN.
- The site uses a valid DV TLS certificate issued by Go Daddy Secure Certificate Authority - G2, valid to 2026-10-16.
- The homepage is a content-rich corporate/product page with company, support, product, and industry-solution sections.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and no confirmed blacklist finding.

What to Verify Next

Before credential or payment interactions, an enterprise customer should independently confirm the contracting entity, applicable service terms, support obligations, and payment protections through normal procurement controls. Where a regulated deployment or sector-specific assurance is required, the relevant authorization, certification, or compliance claim should be confirmed with the appropriate official registry or issuing body. Contact channels should also be validated through an independent route before sensitive account or service changes are requested.

EVIDENCE

- The contact and support pages publish separate presales and after-sales telephone channels and dedicated sales and technical-support channels.
- The site offers trials and paid support contracts, making the contracting entity and service terms relevant to procurement review.
- The site presents solutions for government, finance, education, healthcare, and other sectors, where sector-specific compliance requirements may apply.

Summary Verdict

The overall posture is **high trust and low risk**, with evidence consistent with an established, apparently legitimate corporate website and no observed scam or impersonation contradiction. The principal qualification is that the real-world operator identity has not been independently verified, so legitimacy is strongly supported but not proven as an identity determination.

Infrastructure Integrity

The site resolves to a single hosting endpoint on NetEase infrastructure, with no CDN or WAF vendor detected and a likely origin endpoint directly observable. This provides fewer edge-layer protections than a CDN-backed deployment, but it is an infrastructure characteristic rather than an indication of malicious activity.

Closing Assessment

Ordinary business engagement is proportionate, subject to standard independent checks of the contracting party, service terms, and payment protections before credentials or funds are committed.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of coremail.cn.

- The request stayed on coremail.cn. It was not redirected to another domain. CLEAR
- Registration is published under 北京新网数码信息技术有限公司. CLEAR
- DNS for this domain is served by corpease.net, across 2 name servers. NOTED
- The registration is paid up to 2030-03-17. CLEAR
- The earliest public archive of this site is from 2004-06-28. CLEAR
- It is hosted on Netease-Network, from a server in CN. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about coremail.cn at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
