

Is coronavirus.uno legit? TrustSniffer's high-trust assessment: 85/100

coronavirus.uno

Verdict

HIGH TRUST

coronavirus.uno appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 70%.

What this site appears to be

Italian-language informational site about COVID-19 with prevention advice, a donation IBAN, a small awareness game, and cookie/privacy disclosures. Appears to be run by UnozeroLab Srls with legal footer info.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2020.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This Italian-language public-health campaign website presents COVID-19 prevention information, awareness content, social-media-oriented material, a small educational game, and an appeal for donations to support the healthcare response. Its apparent operating model is informational and charitable, with limited monetization through voluntary donations and consent-based web analytics or advertising-related activity.

Scam/Impersonation Risk

No contradictions were observed: the available evidence identifies no phishing, impersonation, malicious-content, or confirmed blacklist signal. The homepage presents prevention guidance, the “Corona Invaders” awareness game, memes, and a donation request using an IBAN; this is a low-complexity public-information model rather than a scheme involving account credentials, investment returns, or wallet access. The donation mechanism nevertheless creates a payment-integrity consideration because the beneficiary details should be independently associated with the stated organisation before funds are sent. Runtime review recorded interaction-related page changes and console errors, but no hidden forms, external password submissions, wallet activity, clipboard manipulation, or cloaking; these observations do not amount to an identity contradiction. Evidence:

- The homepage contains COVID-19 prevention guidance, the “Corona Invaders” awareness game, social-content sections, and donation banking details.
- Domain registration continuity records the domain as registered on 2020-02-24, approximately 6.49 years old.
- Web-archive records show 218 snapshots from 2020-07-10 through 2025-04-11, covering 6 years with a maximum recorded gap of 1 year.
- External reputation checks recorded no malicious or suspicious detections, while the observed delivery infrastructure was marked as a whitelisted content-delivery network with zero abuse reports.

Regulatory Verification Notes

The footer and legal/contact material present Unozzerolab Srls as the apparent operator, but that association is not independently verified. The site is an informational public-health campaign rather than a service making a regulated financial or investment offering; its disclosures include legal, privacy, and cookie material, although the available evidence does not independently establish the organisation’s status or the beneficiary of the donation account. The absence of a third-party broker match is a contextual reputational signal, not a licensing or regulatory determination. Evidence:

- The site footer provides legal and contact information and identifies Unozzerolab Srls.
- The domain was registered through Key-Systems LLC and has an expiration date of 2027-02-24.
- The site is served from AS13335, CLOUDFLARENET — Cloudflare, Inc., US.
- Transport encryption uses a WE1-issued DV TLS certificate valid through 2026-10-24.

What to Verify Next

Before any donation or credential-related interaction, independently confirm that Unozzerolab Srls and the named donation beneficiary correspond through an official corporate, public-sector, or offline channel. Confirm the bank details directly with the intended beneficiary rather than relying solely on the homepage, and use payment methods that provide appropriate transaction protections. The privacy and cookie disclosures should also be reviewed to establish how analytics and any third-party data uses operate. Evidence:

- The homepage requests voluntary support through an IBAN and BIC rather than through an integrated payment form.
- The site contains privacy and cookie-consent disclosures.
- The behavioural review found no login form, sensitive form, hidden form, or external password form.

Summary Verdict

The overall posture is **high trust and low risk**, and the available evidence is consistent with an established, apparently legitimate public-health website. No scam or impersonation contradiction was identified, although the real-world operator and fundraising relationship remain independently unverified.

Infrastructure Integrity

Cloudflare provides the site’s CDN/WAF layer, and the observed IPv4 and IPv6 addresses were CDN edge addresses rather than identified origin candidates. This reduces direct exposure of the hosting origin and is a mitigating infrastructure characteristic, but it does not independently prove the operator’s legitimacy. Evidence:

- Four observed edge addresses resolve through AS13335, with zero likely-origin IP candidates identified.
- Cloudflare is the detected CDN/WAF provider, with the infrastructure country recorded as the US.

Closing Assessment

Normal informational browsing is proportionate to the assessed posture; any donation, credential submission, or other consequential interaction should follow the independent beneficiary, identity, and payment-protection checks described above.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of coronavirus.uno.

- The request stayed on coronavirus.uno. It was not redirected to another domain. CLEAR
- Registration is published under Key-Systems LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-02-24. NOTED
- The earliest public archive of this site is from 2020-07-10. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about coronavirus.uno at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
