

Is crazyjellyfish.com a scam? TrustSniffer's high-risk assessment: 0/100

crazyjellyfish.com

Verdict

0

OUT OF 100

CRITICAL RISK

crazyjellyfish.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 55%.

What this site appears to be

Default WordPress site with a single introductory post ('Hello world!') and navigation links. No forms or evident monetization beyond a 'Shop' link.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

At a glance

The checks that decide most of this verdict.

Crazy Jelly Fish

Blog

What crazyjellyfish.com served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2021.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

Crazy Jelly Fish is a minimally populated WordPress blog presenting a single introductory “Hello world!” post, standard navigation, and a possible Shop section; its apparent purpose is informational publishing with optional ecommerce rather than an established financial or commercial service.

Scam/Impersonation Risk

The site has a **confirmed blacklist status** supported by malicious detections from multiple external security services, including seven malicious and one suspicious classification. This is a material contradiction to treating the domain as suitable for sensitive interaction, even though the homepage currently appears technically simple: it contains no login or sensitive form, no wallet connection, no external submission activity, and no observed cloaking or suspicious browser behavior. The thin default content also provides little substance with which to establish the site’s purpose or operator, but the decisive concern is the external threat intelligence rather than the page mechanics.

EVIDENCE

- The homepage contains only the “Crazy Jelly Fish” identity, a default WordPress welcome post, and navigation links; no login or sensitive form is present.
- External reputation telemetry records 7 malicious and 1 suspicious detections, with a confirmed blacklist hit.
- The registration record identifies creation on 2020-03-31 and an age of 6.39 years.
- Archive coverage records 0 snapshots, with first seen on 2021-11-29 and last seen on 2026-04-14 across 6 years tracked; this does not establish a recent domain origin.

Regulatory Verification Notes

The visible site does not provide a clear operator identity, regulatory status, license number, or licensing authority. Its navigation includes About, FAQs, Authors, Events, and Shop, but the supplied page content does not show substantive legal or governance disclosures connecting those sections to a verified real-world entity. The available identity evidence therefore remains unverified, and any commercial interaction should be treated as requiring independent confirmation. A valid domain-validated certificate and ordinary hosting arrangements establish transport and infrastructure facts only; they do not establish regulatory authorization or legitimacy.

EVIDENCE

- The homepage title is “Crazy Jelly Fish,” with no displayed legal-entity name or license claim.
- The registration record lists NameCheap, Inc. as registrar and an expiration date of 2027-03-31.
- The site’s TLS certificate is issued by YE1 at DV validation level and is valid to 2026-09-25.
- Hosting telemetry identifies AS47583, AS-HOSTINGER – Hostinger International Limited, CY, with the server located in DE.

What to Verify Next

Before any account, credential, payment, or other sensitive interaction, an institution should independently identify the operator through a reliable corporate or regulatory registry, confirm whether the Shop function is active and who would process any transaction, and validate official contact channels through an offline or independently sourced route. Any claimed authorization should be checked directly with the relevant regulator rather than accepted from the website.

EVIDENCE

- The homepage presents a default introductory post rather than substantive business, ownership, or service documentation.
- The visible navigation includes a Shop link, but the supplied content does not establish the merchant, payment processor, or transaction terms.
- The identity-verification status remains unverified, and the on-page disclosure state is unclear.

Summary Verdict

The website presents a critical sensitive-interaction risk. Its simple, non-interactive presentation does not offset the confirmed external blacklist and malicious-detection signals, while the available material does not

independently establish the operator’s identity or authority.

Infrastructure Integrity

The site resolves directly to Hostinger infrastructure without a detected CDN or WAF layer; two likely origin IPs are visible. This provides less intermediary shielding than a CDN-backed deployment, although the hosting environment itself is a normal, resolved infrastructure arrangement and should be treated only as a limited mitigating context, not as evidence of legitimacy.

EVIDENCE

- Infrastructure telemetry records 2 unique IPs, 0 edge IPs, and 2 likely origin IPs.
- No CDN was detected.
- The resolved network is AS47583, registered through RIPE NCC, with country attribution DE.

Closing Assessment

Sensitive use should be withheld unless independent operator, authorization, and transaction-channel checks produce satisfactory evidence; read-only observation is the proportionate current posture.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- The public registration record for this domain is incomplete.

Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.

Analysis engine signal:direct_threat

External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of crazyjellyfish.com.

- The request stayed on crazyjellyfish.com. It was not redirected to another domain. CLEAR
- Registration is published under NameCheap, Inc.. CLEAR
- DNS for this domain is served by dns-parking.com, across 2 name servers. NOTED
- The registration is paid up to 2027-03-31. NOTED
- The earliest public archive of this site is from 2021-11-29. CLEAR
- It is hosted on AS-HOSTINGER, from a server in DE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about crazyjellyfish.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
