Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2001.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Crownsys.com is an apparently established corporate website for Crownsys Consulting Inc., presenting B2B consulting, software implementation, IoT, project-management, training, and support services for organizations in the Philippines.

Scam/Impersonation Risk

No contradictions were observed. The site presents a consistent corporate-services profile, with no detected phishing, impersonation, malicious-content, or suspicious behavioral indicators. Its stated origin history and clean available reputation are consistent with an established website rather than a newly created or deceptive operation.

EVIDENCE

- Domain registration: created 2002-07-23 and aged 24.09 years; registrar: DOMAIN REGISTRATION SERVICES, INC DBA DOTEARTH.COM.
- Web-archive history: 78 snapshots spanning 2001–2025, covering 25 years tracked.
- Homepage behavior: two successful runs, stable HTTP responses, no external XHR activity, no login form, no hidden forms, and no wallet or credential-draining behavior.
- External reputation checks: zero malicious detections, zero suspicious detections, zero abuse reports, and no confirmed blacklist or phishing finding.

Regulatory Verification Notes

The website's apparent identity is Crownsys Consulting Inc., and its business presentation is consistent with a Philippine B2B implementation provider. The homepage describes CMMS and Primavera software solutions, MONNIT wireless-sensor installations, project portfolio management, professional services, and Primavera P6 training; these offerings indicate a commercial consulting and implementation model rather than a financial or investment service. No licensing or registration number is presented in the supplied site content, so the applicable corporate and sector-specific status remains a transparency matter to confirm independently. The available third-party broker dataset produced no match, which is contextual support only and not a legal or licensing determination. Registration privacy is an administrative detail and does not constitute an identity contradiction.

EVIDENCE

- Homepage: identifies Crownsys Consulting Inc. and describes turnkey software, IoT sensor, project-management, training, and support services.
- Homepage Contact Us section: provides a Philippine business address, two telephone numbers, and links to Facebook, LinkedIn, and Viber.
- Domain registration: registrar is DOMAIN REGISTRATION SERVICES, INC DBA DOTEARTH.COM; expiry is 2027-07-23T19:41:47Z.
- Transport encryption: TLS certificate issued by YR2 at DV validation level, valid to 2026-10-24T16:36:58+00:00.

What to Verify Next

Before credential or payment interactions, an organization should independently confirm the contracting entity, applicable Philippine corporate or sector requirements, service scope, return or cancellation terms, and payment protections. Contact details should be validated through an independently obtained business record or offline route rather than relying solely on information supplied by the website.

EVIDENCE

- Homepage: states that the business originated from a 2009 mission supporting project portfolio management and now serves multiple Philippine industries.
- Contact Us section: supplies physical and telephone contact channels suitable for independent confirmation.
- Site navigation: separates Services, Products, Clients, Partners, and Contact Us, providing defined areas for checking commercial scope and counterparties.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate corporate website and supports a high-trust, low-risk posture. No scam, phishing, impersonation, or identity-conflict indicators were observed, although the real-world operator identity is not independently verified.

Infrastructure Integrity

The site resolves to a single likely origin address without a detected CDN or WAF layer, giving it a relatively direct hosting posture. This is a technical architecture observation, not evidence of illegitimacy; the site remained stable during testing and used valid transport encryption.

EVIDENCE

- Hosting infrastructure: served from AS395111, KVCNET-2009 - KVCHOSTING.COM LLC, US, at 142.214.184.155.
- Infrastructure resolution: 1 unique IP, 0 edge IPs, and 1 likely origin IP; CDN detected: false.
- Registry and location telemetry: ARIN registry, US country designation.

Closing Assessment

Ordinary business engagement is proportionate to the available risk posture, subject to standard independent checks of the counterparty, commercial terms, and payment protections before sensitive or financially consequential activity.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	38%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of crownsys.com.

- The request stayed on crownsys.com. It was not redirected to another domain. CLEAR
- Registration is published under DOMAIN REGISTRATION SERVICES, INC DBA DOTEARTH.COM. CLEAR
- DNS for this domain is served by dacewebsolutions.com, across 2 name servers. NOTED
- The registration is paid up to 2027-07-23. NOTED
- The earliest public archive of this site is from 2001-09-26. CLEAR
- It is hosted on KVCNET-2009, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about crownsys.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
