

Is crypto.com legit? TrustSniffer's high-trust assessment: 90/100

crypto.com

Verdict

90

OUT OF 100

HIGH TRUST

crypto.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-10 by automated analysis. Classification confidence 75%.

What this site appears to be

Corporate landing page for Crypto.com Europe describing exchange, app, onchain wallet, cards, staking/earn products, regulatory licenses and product features. Contains calls to action for account creation and app download.

Evidence status and limitations

Evidence completeness:

UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

At a glance

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1996.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

Crypto.com Europe is a corporate cryptocurrency platform presenting exchange and brokerage services, custodial and self-custody wallet functionality, payment-card products, staking and earn offerings, and related financial and blockchain services for European users.

Scam/Impersonation Risk

No contradictions were observed: the available evidence shows no phishing, impersonation, confirmed blacklist, or conflicting legal-entity signal. The site has a substantial historical and public footprint, and its content is consistent with an established cryptocurrency exchange rather than a transient or deceptive landing page. One isolated external malicious classification was recorded, but it was not corroborated by the other screening results, which showed no blacklist hit, no broader malicious consensus, and no abuse reports; it therefore remains a limited reputational anomaly rather than evidence of impersonation or a scam.

EVIDENCE

- Domain registration records show registration on 1993-05-06 and an age of 33.28 years.
- Historical records contain 5000 snapshots spanning 1996-12-22 to 2022-08-18, covering 27 years.
- The homepage presents a mature corporate exchange-and-wallet service, with no page-level red flags or detected brand-impersonation indicators.

Regulatory Verification Notes

The site presents itself as authorized under MiCA, EMD, and MiFID II and describes authorization as a Crypto-Asset Service Provider, Electronic Money Institution, and Investment Firm. These are substantive on-site regulatory claims, but the supplied evidence does not independently verify the relevant legal entities, registrations, or regulator records; the operator identity should therefore be treated as likely rather than proven. The underlying business model—custodial cryptocurrency exchange and brokerage, card-reward economics, subscription services, and staking or earn products—carries ordinary financial, counterparty, custody, and product-specific risks even though no fraud indicators were identified. Registration through Network Solutions, LLC is an additional established-domain signal, but it does not independently validate the site's regulatory claims.

EVIDENCE

- The homepage and “Licenses & Registration” content state MiCA, EMD, and MiFID II authorization claims and identify CASP, EMI, and Investment Firm status.
- The homepage provides account creation, login, and application-download calls to action for financial services.
- The domain registrar is Network Solutions, LLC, with an expiration date of 2034-05-07.

What to Verify Next

Before credential or payment interactions, an institution should independently match the legal entity named in the site's licensing disclosures to the applicable European regulatory registers. The same review should confirm the applicable terms, custody arrangements, withdrawal conditions, fees, card terms, refund or return provisions, and available payment-protection mechanisms. Official support and contact channels should be confirmed through an independent route, and any application should be obtained from the platform's verified publisher listing rather than an unsolicited message or advertisement.

EVIDENCE

- The “Licenses & Registration” page supplies the regulatory categories and authorization descriptions to be matched against official registers.
- The terms, product, card, and account-registration areas define the contractual and payment conditions requiring review before engagement.
- The homepage's login, sign-up, and app-download functions create the relevant credential and payment-interaction points for independent channel verification.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture for the domain itself. The principal remaining qualification is that the real-world operator identity and regulatory status are not independently established by the supplied evidence, so legitimacy should be regarded as strongly supported but not proven.

Infrastructure Integrity

The site is protected by Cloudflare's CDN/WAF, with observed addresses operating as edge infrastructure and no origin candidate exposed in this analysis. This reduces direct origin exposure and is a mitigating security control, but protective hosting alone is not proof of legitimacy.

EVIDENCE

- Served from AS13335, CLOUDFLARENET — Cloudflare, Inc., US.
- The transport certificate is issued by WE1, uses Domain Validation (DV), and is valid to 2026-10-26.
- Observed edge infrastructure includes 104.19.222.17 on AS13335; all seven observed addresses were classified as CDN edges.

Closing Assessment

Ordinary use may proceed on a qualified basis, with independent confirmation of merchant identity, regulatory status, contractual terms, and payment protections completed before credentials or funds are committed.

Written analysis generated 2026-08-10 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	79/100
Identity verification confidence	39%

- Trusted social count=3

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of crypto.com.

- The request stayed on crypto.com. It was not redirected to another domain. CLEAR
- Registration is published under Network Solutions, LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2034-05-07. CLEAR
- The earliest public archive of this site is from 1996-12-22. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about crypto.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
