

Is crypto.ru legit? TrustSniffer's high-trust assessment: 100/100

crypto.ru

Verdict

100

OUT OF 100

HIGH TRUST

crypto.ru appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-07-31 by automated analysis. Classification confidence 75%.

What this site appears to be

Russian-language cryptocurrency media portal Crypto.ru featuring current news, articles, market prices, coin and exchange rankings, forecasts, educational resources, tools, forums, and user blogs. The page promotes third-party exchanges, exchangers, token offerings, and crypto services but explicitly describes itself as an independent informational resource that neither provides financial services nor accepts user payments.

Evidence status and limitations

Evidence completeness: UNKNOWN

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 1997.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This website is an established Russian-language cryptocurrency media and community portal presenting news, market information, comparative rankings, educational material, analytical tools, and user-generated content. Its apparent business model is publishing and audience monetisation through advertising, partnerships, and referral-oriented coverage rather than directly providing financial services or accepting customer funds.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behaviour, or confirmed malicious reputation signals were observed. The domain has a substantial historical footprint, meaningful traffic presence, and stable on-page behaviour. Interactive testing found no hidden or sensitive forms, external password submission, wallet-provider interaction, wallet-draining logic, clipboard interference, cloaking, or suspicious scripts. These converging signals support the conclusion that the site is legitimate and established.

- Domain records show registration on 23 July 2019, approximately 7.03 years old, through REGRU-RU, with expiry on 23 July 2027.
- The domain's archival record contains 429 snapshots spanning 14 February 1997 to 26 July 2026, representing 30 years of tracked history; no suspicious repurposing or semantic drift was established.
- External reputation telemetry recorded 0 malicious and 0 suspicious classifications, no search-safety alert, no abuse reports, and a global traffic rank of 280,101.
- Behavioural examination of the homepage completed two successful runs without phishing forms, wallet-sensitive activity, credential forwarding, cloaking, or clipboard manipulation.

Regulatory Verification Notes

The homepage expressly characterises the operation as an independent informational resource that neither supplies financial services nor accepts payments. It makes no licensing claim, which is consistent with the presented media model and is not evidence of misconduct. Nevertheless, its coverage includes exchange and exchanger comparisons, token promotions, price forecasts, staking-platform directories, P2P services, decentralised exchanges, ICO/IDO calendars, and AML-related tools; these editorial or promotional materials should not be interpreted as regulatory endorsement of the featured third parties. No matching broker-reputation record was identified, and that result has no bearing on the portal's legal status.

- The homepage states that the portal is independent, does not provide financial services, and does not accept user payments.

- The homepage contains directories and promotional coverage of third-party exchanges, exchangers, token offerings, staking services, P2P platforms, and other cryptocurrency services.
- The site's transport encryption uses a valid DV certificate issued by YR2, valid until 17 October 2026.
- The homepage presents editorial and community functions rather than an on-page deposit, investment-account, or payment workflow.

What to Verify Next

Enterprise users should distinguish independently produced editorial material from sponsored, affiliate, or user-submitted placements and validate any featured exchange, token issuer, exchanger, or service provider against the appropriate official registry before entering a separate commercial relationship. Material market forecasts and rankings should be corroborated with independent data sources, while official contact and social channels should be confirmed through separately established organisational records where reliance on them has financial or operational consequences.

- The homepage combines editorial coverage with rankings, reviews, forecasts, advertisements, and referral-oriented service listings.
- The homepage links to a forum, user blogs, YouTube, Telegram, and X, creating a mixture of publisher-controlled and community or third-party communication channels.
- No sensitive form or untrusted form destination was present on the examined homepage.

Summary Verdict

The website has a high-trust posture and is assessed as a legitimate, mature information portal. Its sustained provenance, clean security reputation, stable behaviour, and coherent publishing model converge without evidence of fraud or impersonation.

Infrastructure Integrity

The site is served from Russian hosting infrastructure operated by DDOS-GUARD. No CDN or WAF edge layer was identified, and two resolved addresses were assessed as likely origin systems; this direct hosting posture is not, on the supplied evidence, associated with abusive behaviour and does not detract from the overall legitimacy assessment.

- The site's hosting infrastructure is served from AS57724 (DDOS-GUARD LTD, RU).
- Infrastructure resolution identified two likely origin addresses and no CDN edge addresses.

Closing Assessment

Normal browsing, registration, account login, and standard use are appropriate; ordinary source-validation practices should be applied before relying financially on independently operated services featured in published content.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
--------	--------

Identity score	73/100
Identity verification confidence	74%

- Trusted social count=1

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of crypto.ru.

- The request stayed on crypto.ru. It was not redirected to another domain. [CLEAR](#)
- Registration is published under REGRU-RU. [CLEAR](#)
- DNS for this domain is served by net., across 4 name servers. [NOTED](#)
- The registration is paid up to 2027-07-23. [NOTED](#)
- The earliest public archive of this site is from 1997-02-14. [CLEAR](#)
- It is hosted on DDOS-GUARD, from a server in RU. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about crypto.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that

evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
