Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2017.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

CryptoDaily is a cryptocurrency and financial-news publication presenting digital-asset coverage, market information, DeFi and Web3 analysis, regulation and security reporting, educational material, newsletters, and sponsored content; its apparent business model is advertising, partnerships, and media engagement rather than soliciting deposits or investment returns.

Scam/Impersonation Risk

No contradictions were observed across the site's identity, content, behavioral, and external-reputation signals. The homepage presents a coherent news-portal model, with editorial topics, market listings, legal links, an investment disclaimer, and no login, credential-harvesting, wallet-connect, or sensitive submission mechanism. The site's established historical continuity and clean external reputation further support its authenticity.

- The homepage identifies CryptoDaily as a cryptocurrency and financial-news portal covering Bitcoin, Ethereum, DeFi, Web3, regulation, markets, security, and technology.
- The site's historical record contains 5,000 snapshots across six tracked years, from 2017-12-14 through 2022-10-03, with no suspicious repurposing identified.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with no blacklist or phishing finding.
- The homepage's behavioral analysis recorded no hidden forms, wallet-drainer activity, clipboard hijacking, or cloaking.

Regulatory Verification Notes

CryptoDaily operates as a media and information publication rather than a deposit-taking or investment-service platform. The homepage includes editorial and legal navigation and an investment disclaimer, but no specific financial-services license or registration claim is presented; this is a transparency point for regulatory classification, not evidence of impersonation or fraud. A separate broker-reputation dataset produced no match, providing contextual support but not a licensing determination.

- The homepage presents news, educational material, market information, newsletters, advertising, and sponsored or partner content.
- Domain registration dates to 2017, with an expiration date of 2028-08-08; the registrar is Team Blue Internet Services UK Limited trading as LCN.

- The site is served from AS13335, Cloudflare, Inc.; its TLS certificate is issued by WE1 using DV validation and is valid through 2026-10-05.
- The homepage contains an investment disclaimer and links to editorial and legal information.

What to Verify Next

For any regulated financial activity contemplated beyond ordinary media use, the relevant legal or regulatory page should be checked for the applicable operating entity and jurisdiction, and any claimed authorization should be confirmed independently with the appropriate public registry. Editorial attribution and official contact channels should also be confirmed through the site’s own legal and contact navigation before relying on sponsored material.

- The homepage provides editorial, legal, and contact/navigation context.
- The site describes sponsored betting and partner content among its coverage and commercial activity.
- No specific license number or regulatory authority is identified in the supplied site analysis.

Summary Verdict

CryptoDaily presents as a legitimate, established, and trustworthy digital-asset news publication. The convergence of coherent editorial purpose, sustained historical presence, clean reputation signals, and normal site behavior supports a high-confidence positive trust posture.

Infrastructure Integrity

The site is protected by Cloudflare’s CDN and WAF, with observed addresses resolving to Cloudflare edge infrastructure rather than a directly exposed origin. This reduces direct infrastructure exposure and is a mitigating security characteristic, although protective hosting alone is not proof of legitimacy.

Closing Assessment

Normal interaction, including account login and standard use, is appropriate; regulated or high-value reliance should remain aligned with the site’s role as an information publisher and with independently confirmed legal disclosures.

Written analysis generated 2026-08-02 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about cryptodaily.co.uk at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
