Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2003.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

CryptoQuant is an established cryptocurrency analytics platform that presents on-chain and off-chain datasets, pre-built charts, APIs, customizable dashboards, no-code analytical tools, research, and real-time alerts for professional and institutional users. Its apparent business model is subscription-based analytics software, supplemented by institutional data services, advertising, and an author program, rather than asset custody or investment management.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or other substantive fraud signals were observed. The homepage consistently presents an analytics-software service for BTC, ETH, exchange flows, derivatives, miner activity, and network indicators; it does not solicit deposits, promise guaranteed returns, or present an investment-management offering. Interactive testing also found no wallet-provider integration, wallet-draining behavior, clipboard hijacking, cloaking, hidden forms, or externally submitted passwords.

- The homepage describes charts, dashboards, research, alerts, APIs, and drag-and-drop analytics, with no sensitive form detected.
- Observed browser behavior recorded zero wallet-connect, wallet-sensitive, wallet-drainer, clipboard-hijack, fingerprinting, and suspicious-inline-script events across two successful runs.
- External threat-reputation checks recorded zero malicious and zero suspicious detections, no malicious safe-browsing finding, no abuse reports, and no matching threat signatures.
- Historical records contain 302 archive snapshots spanning 2003–2026, representing 24 years of tracked coverage, with no confirmed suspicious repurposing or semantic conflict.

Regulatory Verification Notes

The reviewed content identifies a named operating company and provides legal policies, product documentation, pricing information, and support resources. No financial-services licence or registration number is claimed in the supplied pages; given that the stated activity is market-data SaaS rather than custody or investment management, this is best treated as a matter of confirming contractual scope, not as evidence of misconduct. The private registrant entry through Domains By Proxy is an administrative registration arrangement and does not undermine the convergent identity and reputation evidence.

- The homepage positions the service as data and analytics software for individuals and institutions, while the reviewed site content references documentation, pricing, support, and legal policies.
- The domain's WHOIS record shows registration on 3 May 2013 (~13.25 years old), an expiry date of 3 May 2034, and GoDaddy.com, LLC as registrar.
- The reviewed pages make no licence claim and supply no licence authority or licence number.

- The domain has a high page-authority profile and an established global traffic footprint, ranked 46,106.

What to Verify Next

Institutional procurement should confirm the operating company named in the legal terms, ensure that the contracting entity and invoice details match those terms, and review the selected subscription's data rights, API limits, service levels, retention practices, and permitted institutional use. Official support channels should be confirmed through the platform's own authenticated interface before account-administration or billing requests are acted upon.

- The legal-policy materials provide the appropriate source for matching the contracting entity and applicable terms.
- The pricing, institutional-services, and API-documentation areas are the relevant sources for validating entitlements, delivery mechanisms, and usage restrictions.
- The platform advertises multiple delivery formats—including charts, APIs, dashboards, alerts, and raw or proprietary metrics—making scope alignment material to procurement.
- The homepage provides distinct institutional and general-user pathways, supporting role-specific onboarding checks.

Summary Verdict

CryptoQuant presents as a legitimate, established, and trustworthy cryptocurrency analytics service. Its coherent commercial purpose, durable provenance, strong authority and traffic footprint, clean external reputation, and absence of deceptive page or browser behavior support normal interaction, including account login and standard platform use.

Infrastructure Integrity

The site is protected by Cloudflare's CDN/WAF, and all four observed IPv4 and IPv6 addresses were Cloudflare edge systems. This reduces direct exposure of the origin server and is a conventional protective control, although infrastructure protection alone is not proof of legitimacy.

- Hosting infrastructure serves the site from AS13335 (CLOUDFLARENET – Cloudflare, Inc., US).
- Transport encryption uses a WE1-issued domain-validated certificate, valid until 19 October 2026.
- The observed edge addresses were 104.18.4.28, 104.18.5.28, 2606:4700::6812:41c, and 2606:4700::6812:51c.

Closing Assessment

Normal use is appropriate, with standard enterprise procurement, account-security, and payment-approval controls applied in line with institutional policy.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
--------	------------

Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of cryptoquant.com.

- The request stayed on cryptoquant.com. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2034-05-03. CLEAR
- The earliest public archive of this site is from 2003-12-11. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about cryptoquant.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that

evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
