

Is cryptorussia.ru legit? TrustSniffer's high-trust assessment: 80/100

cryptorussia.ru

Verdict

80

OUT OF 100

HIGH TRUST

cryptorussia.ru appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-07-31 by automated analysis. Classification confidence 75%.

What this site appears to be

Russian-language cryptocurrency news and review portal featuring extensive trader, broker, exchange, mining, and money-earning game directories. It presents ranked traders as verified or fraudulent, includes investment-risk disclaimers and privacy policies, and invites fraud victims to contact the site, but the supplied page text does not substantiate its verification methodology or disclose commercial relationships.

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2016.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an established Russian-language cryptocurrency news and financial-review portal that publishes market information, trader rankings, broker and exchange comparisons, fraud-awareness material, and directories covering mining and money-earning games, apparently operating as a content and referral-oriented publication.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing activity, or confirmed malicious reputation findings were observed. The homepage distinguishes between traders it characterizes as verified and fraudulent, but the supplied content does not explain the methodology supporting those classifications; this is an editorial substantiation issue rather than evidence of impersonation. The domain's long operational history, continuous archival presence, established traffic footprint, stable page delivery, and absence of sensitive or concealed forms collectively support the conclusion that this is a legitimate, established website. One external reputation engine returned an isolated suspicious classification, but no engine identified the domain as malicious and no broader threat-source convergence supports that signal.

- Domain-registration records show registration through REGRU-RU on 11 January 2015, making the domain approximately 11.56 years old; registration extends to 11 January 2027.
- The web archive contains 273 snapshots spanning 6 September 2016 to 22 July 2026, representing 11 tracked calendar years with no gap exceeding one year and no detected historical repurposing.
- The homepage presents cryptocurrency news and trader, broker, and exchange rankings, while the supplied page text does not substantiate how "verified" and "fraudulent" classifications are determined.
- Homepage behavior testing found no login form, hidden form, external password form, wallet interaction, clipboard hijacking, cloaking, or brand-impersonation indicator.

Regulatory Verification Notes

The website presents itself as an information and review publisher, not as a broker or regulated financial intermediary. Its content spans Bitcoin, Ethereum, TON, and 1win Token, alongside broker directories, binary-options coverage, cloud mining, Telegram earning applications, and games offering monetary withdrawals. These subjects can influence consequential financial decisions, making the provenance and independence of rankings important. Investment-risk disclaimers and privacy materials are present, but the supplied content does not establish a licensing claim, corporate registration number, ranking methodology, or the nature of possible

advertising, referral, promoted-listing, or affiliate relationships. These are limited disclosure matters concerning editorial governance and commercial transparency, not evidence of fraud or an identity conflict.

- The homepage includes broker categories framed around Central Bank licensing, sanctions status, minimum deposits, commissions, binary options, and regional availability, but does not provide a visible methodology for those comparisons.
- The site's content includes investment-risk warnings and privacy-policy material and invites fraud victims to make contact.
- The homepage contains extensive directories for cryptocurrency exchanges, Forex and cryptocurrency brokers, mining services, NFT and TON games, Telegram clicker applications, and other earning products.
- The site's transport encryption uses a DV certificate issued by YR2, valid until 9 September 2026.

What to Verify Next

Institutions intending to rely on the site's rankings should obtain the underlying assessment criteria, evidence standards, update process, and correction policy directly from the publisher. Any broker, exchange, or investment service featured by the site should be checked independently against the registry of the regulator claimed by that service. Commercial relationships affecting placement should be clarified, including affiliate compensation, paid reviews, and promoted listings. Official support and editorial contact channels may also be confirmed independently before submitting complaints or sensitive case information.

- The homepage contains ranked and categorical recommendations capable of directing visitors toward third-party financial-service providers.
- The supplied page content does not describe sponsorship, referral compensation, paid placement, or other commercial-selection criteria.
- The site publishes fraud-awareness material and solicits reports from alleged victims, creating a foreseeable need for documented complaint-handling and data-protection procedures.

Summary Verdict

The website is legitimate, established, and trustworthy, with strong historical continuity, a meaningful public footprint, stable operation, and no observed contradictions indicating phishing, impersonation, or coordinated malicious activity. Normal interaction, including account login and standard use where offered, is appropriate. The principal qualification concerns the evidentiary transparency of its editorial rankings, not the authenticity or safety of the website itself.

Infrastructure Integrity

The site is protected by a Cloudflare-identified CDN/WAF configuration, with the observed address operating as an edge endpoint rather than a directly exposed origin. This reduces direct infrastructure exposure and supports operational resilience, although protective infrastructure is not independently determinative of legitimacy.

- Hosting telemetry identifies 95.129.236.91 on AS57724, operated by DDOS-GUARD LTD in Russia.
- Infrastructure resolution observed one CDN edge address and no origin-server candidate.

Closing Assessment

Prospective users may engage with the website normally, while independently validating third-party financial recommendations before acting on them or committing funds.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of cryptorussia.ru.

- The request stayed on cryptorussia.ru. It was not redirected to another domain. CLEAR
- Registration is published under REGRU-RU. CLEAR
- DNS for this domain is served by com., across 2 name servers. NOTED
- The registration is paid up to 2027-01-11. NOTED
- The earliest public archive of this site is from 2016-09-06. CLEAR
- It is hosted on DDOS-GUARD, from a server in RU. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about cryptorussia.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
