

Is cryptoslate.com legit? TrustSniffer's high-trust assessment: 100/100

cryptoslate.com

Verdict

100

OUT OF 100

HIGH TRUST

cryptoslate.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-07-31 by automated analysis. Classification confidence 75%.

What this site appears to be

CryptoSlate homepage presenting cryptocurrency journalism, live coin prices, market analysis, regulatory tracking, educational guides, reviews, prediction-market data, issuer-labeled press releases, videos, and a newsletter subscription. The supplied content shows no login, wallet connection, payment request, seed-phrase request, guaranteed-return claim, or other strong phishing indicator.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2017.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an established cryptocurrency news and market-intelligence publication presenting journalism, live digital-asset prices, market analysis, regulatory coverage, educational guides, reviews, prediction-market data, videos, press releases, and a newsletter, supported through advertising, sponsored placements, partnerships, and audience subscriptions.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or confirmed malicious reputation signals were observed. The homepage operates as a content publication rather than a trading or custody interface: it displayed no login form, wallet connection, payment request, seed-phrase prompt, or guaranteed-return solicitation. Its long operating history, sustained archival presence, established global traffic footprint, and clean reputation across the evaluated external threat sources strongly support the conclusion that it is the authentic, legitimate CryptoSlate publication.

- Domain-registration records show registration through GoDaddy.com, LLC on 4 August 2017, making the domain approximately 8.99 years old.
- Historical records contain 5,000 archive snapshots spanning 13 October 2017 to 21 September 2024, with 8 years tracked and no suspicious repurposing or semantic drift identified.
- The homepage presents substantial editorial material covering cryptocurrency news, coin prices, market analysis, regulation, education, reviews, and industry releases, without sensitive credential or wallet-request forms.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no reported abuse, and an established global traffic rank of 32,458.

Regulatory Verification Notes

CryptoSlate presents itself as a publisher of financial and cryptocurrency information, not as a broker, exchange, custodian, or investment service, and it makes no licensing claim in the supplied material. Accordingly, the absence of a financial-services licence is not inconsistent with its apparent business model. The observed presence of legal policies, risk disclaimers, and transparent labeling of sponsored or issuer-provided material strengthens editorial and commercial disclosure quality; no conflicting legal-entity names were identified. Private domain-registration administration through Domains By Proxy is an ordinary administrative arrangement in this context and does not undermine the site's established identity.

- The homepage identifies the service as cryptocurrency news and market intelligence and includes issuer-labeled press releases alongside editorial, educational, review, and market-data content.
- The site-wide content assessment identified legal policies, risk disclaimers, and transparent sponsorship labeling, with no deceptive financial solicitation.
- The domain is registered through GoDaddy.com, LLC using Domains By Proxy, LLC as the registration-privacy service.
- The site’s transport encryption uses a WE1-issued DV TLS certificate valid until 19 October 2026.

What to Verify Next

Enterprise onboarding should confirm that any proposed advertising, sponsored-content, data-licensing, or commercial relationship is documented through independently authenticated CryptoSlate business channels. Content consumers should distinguish editorial reporting from issuer-provided releases and independently validate market information before using it in investment, compliance, or transaction decisions. Routine account login and standard site use are appropriate.

- The homepage visibly separates issuer-labeled press releases from its broader news and analysis offering.
- The observed business model includes advertising, premium brand placements, sponsored content, partnerships, and newsletter audience development.
- The only observed form was an email-newsletter subscription; it was not sensitive and did not submit to an untrusted destination.
- Behavioral testing found no hidden forms, password forms sent externally, wallet-provider interaction, clipboard hijacking, cloaking, or suspicious inline scripts.

Summary Verdict

CryptoSlate is a legitimate, established, and trustworthy digital-asset publication. Its identity, operational history, content maturity, external reputation, and observed behavior converge without contradiction, supporting normal interaction, including account login and standard use.

Infrastructure Integrity

The website is protected by Cloudflare’s CDN/WAF, with all six observed addresses operating as edge nodes and no exposed origin candidate. It is served from AS13335 (Cloudflare, Inc., US); this mainstream protective architecture reduces direct origin exposure and supports availability and abuse resistance, although infrastructure protection alone is not proof of legitimacy.

Closing Assessment

Prospective users and enterprise counterparties may engage normally, while applying standard source-validation and commercial-onboarding controls appropriate to cryptocurrency-focused media content.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
--------	------------

Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of cryptoslate.com.

- The request stayed on cryptoslate.com. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2026-08-04. NOTED
- The earliest public archive of this site is from 2017-10-13. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about cryptoslate.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that

evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
