

Is d-koresolar.com a scam? TrustSniffer's high-risk assessment: 0/100

d-koresolar.com

Verdict

0

OUT OF 100

CRITICAL RISK

d-koresolar.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 55%.

What this site appears to be

D-KORE SOLAR is a local solar solutions provider offering end-to-end services (consultation, design, installation, and maintenance) for residential, commercial, and industrial customers. The site includes service descriptions, featured projects, testimonials, and contact information including physical address, phone numbers and email.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

The page as captured

<https://d-koresolar.com/>

What d-koresolar.com served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2021.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

D-KORE SOLAR presents itself as a local solar-energy services provider offering consultation, system design, installation, maintenance, and project delivery for residential, commercial, and industrial customers, with a business model based on solar-system sales, installation fees, service contracts, and ongoing support.

Scam/Impersonation Risk

The site's stated solar-services model is coherent and the pages contain no obvious deceptive financial solicitation, login form, password collection, wallet functionality, or brand-impersonation indicators. However, this benign presentation is materially outweighed by confirmed external threat detections and blacklist status: the domain was identified as malicious by multiple security sources, including Fortinet and Sophos, with ten malicious detections recorded. This creates a substantial risk for sensitive interaction even though the page content itself does not display an obvious abuse pattern. No identity contradiction between legal entities was observed, but the real-world operator remains independently unverified. The published contact address `not applicable` is not present as a suspicious contact anomaly; no such anomaly was identified.

EVIDENCE

- The homepage presents D-KORE SOLAR as providing residential, commercial, and industrial solar solutions, including consultation, design, installation, and maintenance.
- External reputation telemetry records 10 malicious detections, with Fortinet and Sophos among the flagged vendors, and confirms a blacklist hit.
- Domain registration records show creation on 2021-07-19, with an age of 5.09 years and expiry on 2027-07-19.
- Archived records show 144 snapshots spanning 2021–2026, covering 5 tracked years.

Regulatory Verification Notes

The site provides business descriptions, project information, testimonials, a physical address, telephone numbers, and contact details, but no licensing authority or registration number is identified in the supplied page content. This is a material verification gap for a company offering installation services, particularly where local electrical, construction, or energy-sector requirements may apply; it is not, by itself, proof of a scam. The site's claimed business identity is therefore apparent from its presentation but not independently verified. The absence of a matching record in the supplied broker-intelligence context provides no regulatory endorsement and should not be treated as a licensing conclusion.

EVIDENCE

- The About and Services pages describe end-to-end solar services for residential, commercial, and industrial projects.
- The Contact page contains a physical address, telephone numbers, and an email contact, while the supplied pages do not identify a licensing authority or license number.
- The site is hosted on AS47583, identified as AS-HOSTINGER / Hostinger International Limited, CY.
- Transport encryption uses a DV certificate issued by YE1, valid through 2026-10-16.

What to Verify Next

Before any contract, deposit, site visit, or exchange of personal information, the proposed operator should be confirmed through an independently obtained telephone number or other offline channel rather than relying solely on the website. The legal entity, physical operating address, insurance, installer qualifications, and any required local permits or electrical certifications should be checked against the relevant government or industry registries. Quotations should be supported by a written scope of work, identifiable supplier information, clear warranty terms, and payment arrangements that preserve dispute or chargeback options.

EVIDENCE

- The homepage claims more than 15 years of experience while the domain registration record dates from 2021; this does not establish when the underlying business began operating.
- The site displays counters for projects completed, happy customers, years of experience, and expert team members, but the supplied page text shows zero values for those counters.
- The website has no detected sensitive form, login form, hidden form, external password form, or wallet-connection activity.
- The site's contact and quotation pathway should be independently reconciled with the legal entity and applicable local licensing records.

Summary Verdict

The overall posture is **critical and unsuitable for sensitive interaction**. The site has a plausible corporate-services presentation, but confirmed malicious detections and blacklist status dominate the assessment, while operator identity remains unverified. The website should not be treated as an established or trusted counterparty on the supplied evidence.

Infrastructure Integrity

The site resolves directly to infrastructure associated with Hostinger International Limited rather than a detected CDN edge, with four likely origin addresses identified and no CDN deployed. This provides a concrete hosting path but offers limited protective separation between the website and its origin infrastructure; hosting arrangements are mitigating or descriptive signals only and do not establish legitimacy.

Closing Assessment

Sensitive actions should be suspended until the operator, service credentials, and required authorizations are independently confirmed; any unavoidable engagement should remain limited to non-sensitive information gathering.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- A large share of what the page loaded came from other domains.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_MODERATE
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of d-koresolar.com.

- The request stayed on d-koresolar.com. It was not redirected to another domain. [CLEAR](#)
- Registration is published under GoDaddy.com, LLC. [CLEAR](#)
- DNS for this domain is served by dns-parking.com, across 2 name servers. [NOTED](#)
- The registration is paid up to 2027-07-19. [NOTED](#)
- The earliest public archive of this site is from 2021-09-22. [CLEAR](#)
- It is hosted on AS-HOSTINGER, from a server in UA. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about d-koresolar.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
