

Is dadata.ru legit? TrustSniffer's high-trust assessment: 93/100

dadata.ru

Verdict

93

OUT OF 100

HIGH TRUST

dadata.ru appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 70%.

What this site appears to be

DaData product landing page describing data-cleaning and enrichment services (address standardization, company lookup, geocoding, document recognition) for businesses. Contains feature descriptions, target audiences, contact info and legal/company identifiers; serves as marketing and product documentation for API-based paid services.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2023.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

dadata.ru is a B2B SaaS website presenting data-cleaning, validation, enrichment, address, company-lookup, geocoding, and document-recognition services through paid APIs, subscriptions, and enterprise arrangements for business users.

Scam/Impersonation Risk

No contradictions were observed: external reputation checks recorded no malicious or suspicious detections, no phishing or brand-impersonation indicators were identified, and no blacklist hit was recorded. The page presents a coherent business purpose with product documentation, customer-oriented use cases, contact information, and legal/company identifiers rather than a deceptive or investment-oriented proposition. Behavioral testing did record a password form, but the page review found no hidden sensitive form, untrusted submission destination, wallet activity, or credential-harvesting pattern; this is therefore a limited observation rather than evidence of impersonation or fraud.

EVIDENCE

- The homepage describes DaData as a business data-service provider and contains product, pricing, support, contact, and legal/company content.
- The domain was registered on 2012-10-16 and is approximately 13.83 years old.
- The archive contains 2 snapshots from 2023-05-17, with 1 year tracked.
- External reputation evaluation recorded 0 malicious and 0 suspicious detections, with no blacklist or phishing result.

Regulatory Verification Notes

The available evidence is consistent with an established, apparently legitimate commercial data-service website, but the real-world operator identity is not independently verified. The site describes a conventional B2B software model rather than claiming to be a regulated financial provider; its content includes company identifiers and commercial service information, while a regulatory license or registration number is not presented as part of the available site disclosures. That is a verification matter for contracting and procurement, not evidence of a scam. A separate broker-reputation dataset produced no match, and the site has a strong global traffic footprint and high page-authority signal that support its established-site profile.

EVIDENCE

- The site's hosting resolves to AS51115, HLL-AS - HLL LLC, RU.
- The site's TLS certificate is issued by GlobalSign GCC R3 DV TLS CA 2020, uses DV validation, and is valid to 2026-09-19.
- The site has a traffic rank of 20158 and is within the top 1,000,000 sites.
- The homepage contains legal/company identifiers and commercial service information; no financial license number is displayed in the reviewed content.

What to Verify Next

Before credential or payment interactions, an enterprise user should independently confirm the contracting entity shown in the site's legal and commercial materials, reconcile it with the invoice and subscription agreement, and review cancellation, refund, data-processing, and payment-protection terms. For procurement or regulated use cases, the relevant registry or corporate-record source should be checked directly, and official support channels should be confirmed through an independent route before sensitive account changes or payments.

EVIDENCE

- The homepage provides distinct navigation for products, APIs, pricing, clients, support, and blog content.
- The reviewed page contains no hidden forms, no untrusted form destination, and no wallet-connection behavior.
- The site was successfully observed in two behavioral runs, both completing successfully.

Summary Verdict

The overall posture is **high trust and low risk**, with evidence converging on an established, apparently legitimate website suitable for normal business evaluation. The assessment does not independently prove the identity of the real-world operator, so legitimacy should be understood as evidence-consistent rather than conclusively established.

Infrastructure Integrity

The site is hosted directly through HLL-AS - HLL LLC in Russia on AS51115, with three likely origin addresses identified and no CDN or WAF detected. The resolved, identifiable hosting posture and valid transport encryption are positive technical conditions, although the absence of a CDN/WAF means there is no additional edge-layer protection to treat as a mitigating control.

Closing Assessment

Ordinary use may proceed proportionately, provided independent contracting-entity, commercial-terms, and payment-protection checks are completed before credentials or payments are submitted.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of dadata.ru.

- The request stayed on dadata.ru. It was not redirected to another domain. CLEAR
- Registration is published under RU-CENTER-RU. CLEAR
- DNS for this domain is served by net., across 2 name servers. NOTED
- The registration is paid up to 2026-10-16. NOTED
- The earliest public archive of this site is from 2023-05-17. CLEAR
- It is hosted on HLL-AS, from a server in RU. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about dadata.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
