

Is dagelijkseverhalen.nl legit? TrustSniffer's high-trust assessment: 75/100

dagelijkseverhalen.nl

Verdict

75

OUT OF 100

HIGH TRUST

dagelijkseverhalen.nl appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 55%.

What this site appears to be

Dutch-language news/celebrity site (Dagelijkseverhalen.nl) listing recent headlines across news, showbiz, royal family, weather and accidents. Pagination and site links visible; appears to be a content/aggregation site with privacy and notices links in footer.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2019.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

Dagelijkseverhalen.nl is a Dutch-language news and entertainment website presenting short articles across national news, celebrity and showbiz, royal-family topics, weather, accidents, and human-interest stories. Its apparent business model is an ad-supported content or aggregation service, with pagination and privacy and notices links available through the site footer.

Scam/Impersonation Risk

No confirmed phishing, impersonation, or identity contradiction was observed. The homepage presents ordinary editorial content rather than a credential-collection or transaction interface, and the available page analysis found no login form, hidden form, sensitive form, or untrusted form destination. One external reputation check produced an isolated malicious detection, but this was not corroborated by the other reputation checks, which found no malicious browsing warning, no abuse reports, and no confirmed blacklist status; it is therefore treated as an unconfirmed reputational anomaly rather than evidence of a scam. Runtime activity included external requests and page changes, but no wallet interaction, credential harvesting, cloaking, clipboard activity, or executable abuse pattern was detected.

EVIDENCE

- Homepage: displays current Dutch news, celebrity, weather, and accident headlines with article pagination and no login or payment interface.
- Homepage technical behavior: no hidden forms, password submissions, wallet-provider activity, clipboard manipulation, or cloaking was detected.
- External reputation telemetry: one isolated malicious detection was recorded, while other evaluated checks returned no malicious result and the hosting address had zero abuse reports.

Regulatory Verification Notes

The site appears to operate as a general news and media publication rather than a regulated financial or investment service. Its footer includes privacy and notices links, but the supplied material does not identify an independently verified real-world operator, and no licensing claim or registration number is presented; this is a transparency matter relevant to publisher accountability, not evidence of fraud. The domain has a multi-year registration history, is registered through Key-Systems GmbH, and uses a known domain-validated TLS certificate. No separate regulated-broker association was identified in the available third-party context.

EVIDENCE

- Domain registration: registered 2019-02-21, approximately 7.5 years old, through Key-Systems GmbH.
- Hosting telemetry: served on AS13335, CLOUDFLARENET — Cloudflare, Inc., US.
- Transport security: TLS certificate issued by WE1, validation level DV, valid to 2026-10-05.
- Footer: privacy and notices links are visible, while no license number or regulated-entity disclosure is shown in the supplied site content.

What to Verify Next

Before any future credential or payment interaction, an independent check should confirm the publisher's legal identity, contact channels, and applicable consumer or editorial accountability arrangements. The privacy and notices pages should be reviewed for a named operator, governing jurisdiction, and a clear process for corrections or complaints. If the site introduces paid services, subscriptions, or other regulated activity, any claimed registration should be checked directly against the relevant official registry rather than relying solely on the site's own statement.

EVIDENCE

- Footer: provides the privacy and notices entry points for reviewing operator and accountability information.
- Homepage: presents an editorial content model and no sensitive transaction form, so any later change toward paid or account-based activity should be reassessed.
- Identity assessment: the available evidence supports an established-looking publication, but does not independently verify the real-world operator.

Summary Verdict

The available evidence is consistent with an established, apparently legitimate, low-risk news and aggregation website. Its high-trust posture is supported by coherent editorial content, stable operation, multi-year domain continuity, and sound transport and hosting arrangements, while the operator’s real-world identity remains independently unverified.

Infrastructure Integrity

The website is protected by Cloudflare’s CDN/WAF architecture, with observed addresses belonging to CDN edge infrastructure and no origin candidate identified in the supplied network analysis. This reduces direct exposure of the underlying service and is a mitigating technical control, but it is not independent proof of the publisher’s legitimacy.

Closing Assessment

Ordinary browsing is proportionate to the assessed posture; before credentials, payments, or any newly introduced commercial interaction, standard independent checks of the counterparty, terms, and payment protections should be completed.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of dagelijkseverhalen.nl.

- The request stayed on dagelijkseverhalen.nl. It was not redirected to another domain. CLEAR
- Registration is published under Key-Systems GmbH. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The earliest public archive of this site is from 2019-04-01. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about dagelijkseverhalen.nl at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
