Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is DataBank's corporate platform for marketing enterprise data-center infrastructure, including colocation, cloud, interconnection, managed security, compliance, and related services, with prospective customers directed toward quote requests and facility tours.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behavior, or other scam indicators were observed. The long-established domain, substantial global traffic footprint, clean external threat reputation, and content-rich corporate presentation converge strongly around a legitimate operating website. The homepage contained neither a login form nor a sensitive-data form, and behavioral testing found no cloaking, hidden forms, wallet interaction, clipboard manipulation, or credential transfer to external destinations.

- The domain-registration record shows registration on 16 April 1993, making the domain approximately 33.32 years old; it is registered through GoDaddy.com, LLC.
- External reputation telemetry recorded zero malicious and zero suspicious detections, no malicious safe-browsing classification, no external blacklist finding, and no reported IP abuse.
- The domain holds a global traffic rank of 11,254, placing it within an established, heavily visited segment of the web.
- The corporate homepage consistently identifies DataBank and describes data-center and managed-infrastructure services without detected brand impersonation, deceptive financial content, or phishing forms.

Regulatory Verification Notes

The observed business model concerns enterprise infrastructure rather than brokerage, investment, or consumer financial services, and the website makes no financial-license claim requiring reconciliation. No conflicting legal-entity names were identified in the supplied page evidence. Domain-registration privacy through Domains By Proxy, LLC is an administrative registration arrangement and does not undermine the consistent DataBank identity presented by the site. The absence of a match in the supplied broker-intelligence dataset has no adverse regulatory significance for this business category.

- The homepage presents a B2B sales model centered on requesting service quotations and scheduling data-center facility tours.
- The homepage describes colocation, enterprise cloud, interconnection, managed security, compliance, and related IT-infrastructure services; it presents no cryptocurrency, brokerage, or investment product.
- The site's transport encryption uses an organization-validated certificate issued by Thawte TLS RSA CA G1 to DataBank, Inc., valid until 20 February 2027.

- The domain-registration record lists Registration Private through Domains By Proxy, LLC, with registration currently extending to 4 April 2031.

What to Verify Next

Standard enterprise procurement should confirm that the legal entity named in any proposal, master services agreement, order form, and invoice is consistent across the transaction. Prospective customers should also validate facility location, service scope, security responsibilities, compliance attestations, and service-level commitments against the requirements of the intended deployment. Official sales and support channels should be confirmed through the corporate site before exchanging contractual or operational information.

- The homepage directs prospective customers toward quotations and facility tours, making proposal and contracting-document review the appropriate next control.
- The homepage markets managed security and compliance capabilities, making the precise allocation of controls, audit coverage, and contractual responsibilities material to customer due diligence.
- The homepage identifies operations across numerous US metropolitan areas and the United Kingdom, making facility-specific jurisdiction and service-scope confirmation relevant.
- The site publishes corporate links to LinkedIn, YouTube, and Vimeo, providing additional channels through which organizational branding can be cross-checked.

Summary Verdict

This is a legitimate, established, and trustworthy corporate website with a coherent identity and no observed contradictions. Its mature provenance, credible commercial presentation, clean external reputation, and stable technical operation provide strong, convergent support for normal interaction, including account login and standard use where offered.

Infrastructure Integrity

The website is served from US infrastructure operated by Automattic and is protected by CDN/WAF controls. Potential origin candidates were observable alongside an edge address, so the origin is not wholly isolated; nevertheless, the protective layer provides a meaningful mitigation against routine web attacks and traffic abuse, without independently proving organizational legitimacy.

- The site's hosting infrastructure serves the website from AS2635 (Automattic, Inc., US).
- Infrastructure observation identified three IP addresses: one CDN edge address and two potential origin candidates.
- The observed edge address was 75.126.104.240 on AS36351, while the confirmed serving address was 192.0.66.176 on AS2635.

Closing Assessment

Normal business engagement and standard website interaction are appropriate, subject to the ordinary contractual, security, and supplier-assurance controls applied to any enterprise infrastructure provider.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	38%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of databank.com.

- The request stayed on databank.com. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by databank.com, across 2 name servers. NOTED
- The registration is paid up to 2031-04-04. CLEAR
- It is hosted on AUTOMATTIC, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about databank.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
