- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2018.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is a South African corporate landing page for DataKeepers, presenting bespoke virtual-server, cloud-backup, disaster-recovery, and cloud-infrastructure services for individual and corporate customers, supported by links to specialist service sites and client account access.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behavior, deceptive forms, or other fraud indicators were observed. The domain has a long-established registration and a substantial archival record without evidence of suspicious repurposing. External reputation checks were clean, while observed browser activity showed no cloaking, hidden forms, credential forwarding, malicious scripts, clipboard interference, or cryptocurrency-wallet behavior. These signals converge strongly in support of an authentic, established corporate website.

- The domain registration record shows registration in 2017 (~9.5 years old), with creation on 4 February 2017 and expiry on 4 February 2027.
- The web archive contains 46 snapshots spanning 3 September 2018–22 March 2026 (9 years tracked), with no detected suspicious repurposing or semantic conflict.
- The homepage identifies the business as DataKeepers and consistently describes South African cloud infrastructure, backup, and disaster-recovery services.
- External threat-reputation evidence recorded 0 malicious and 0 suspicious detections, no malicious safe-browsing classification, no abuse reports, and no matched threat signatures.

Regulatory Verification Notes

The homepage identifies DataKeepers as a wholly South African company and states that its infrastructure is entirely company-owned. The available page does not present a corporate registration number, legal terms, privacy notice, or regulatory authorization; however, the business is presented as a cloud-services provider rather than a financial intermediary, and no regulated financial activity or licensing claim appears. This is therefore a limited disclosure consideration, not evidence of illegitimacy. No relevant third-party broker profile was matched.

- The homepage states that DataKeepers is “100 percent South African” and that its cloud infrastructure belongs entirely to the company.
- The captured homepage contains no internal links to legal, privacy, corporate-registration, or licensing pages.

- The hosting infrastructure is served from AS13335 (CLOUDFLARENET — Cloudflare, Inc., US).
- The site's TLS certificate was issued by WE1 with DV validation and is valid until 10 September 2026.

What to Verify Next

For procurement or regulated outsourcing, the prospective customer should obtain DataKeepers' registered-company particulars, service terms, privacy and data-processing documentation, backup-retention terms, recovery objectives, and security-control evidence through the company's established contact route. The contractual review should also confirm data location, subcontractor use, incident-notification obligations, service availability commitments, and responsibility for restoration testing.

- The homepage publishes the telephone number 021 556 9999 and links to established Facebook and Twitter profiles, providing channels for independent corporate-contact confirmation.
- The homepage directs customers to separate specialist sites for virtual-server and cloud-backup offerings, making those service-specific terms appropriate subjects for procurement review.
- The homepage claims security and stability from company-owned infrastructure, but the captured page does not provide supporting certifications, audit reports, recovery objectives, or contractual service levels.

Summary Verdict

The website is legitimate, established, and trustworthy. Its consistent corporate identity, mature historical presence, clean external reputation, coherent service offering, and benign observed behavior collectively support normal interaction, including client login and standard account use.

Infrastructure Integrity

The website is protected by Cloudflare CDN/WAF infrastructure. All observed addresses were Cloudflare edge servers, and the origin server was not directly exposed; this reduces direct infrastructure exposure and provides a meaningful protective control, although it is not independently proof of business legitimacy.

Closing Assessment

Normal engagement and standard use are appropriate, with conventional contractual and security due diligence applied where the service would support regulated, sensitive, or business-critical workloads.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	76%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of datakeepers.co.za.

- The request stayed on datakeepers.co.za. It was not redirected to another domain. CLEAR
- Registration is published under DataKeepers. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-02-04. NOTED
- The earliest public archive of this site is from 2018-09-03. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about datakeepers.co.za at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
