

Is datawebhosting.com.ar legit? TrustSniffer's high-trust assessment: 75/100

datawebhosting.com.ar

Verdict

75

OUT OF 100

HIGH TRUST

datawebhosting.com.ar appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 55%.

What this site appears to be

DataWeb Hosting - Argentine web hosting provider offering shared hosting, VPS (Xen/SSD), reseller plans and domain registration with pricing, contact emails and support information. Site includes login fields and subscription CTA links.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

DataWeb Hosting is an Argentine web-hosting provider presenting shared hosting, Xen and SSD VPS services, reseller plans, and domain registration through recurring hosting subscriptions and one-time infrastructure or domain purchases.

Scam/Impersonation Risk

No contradictions were observed across the supplied evidence: there is no confirmed blacklist, phishing, impersonation, or conflicting legal-identity signal. The site's content presents a coherent hosting-service model with pricing, support information, company history, and ordinary account and purchasing functions, while behavioral analysis found no cloaking, hidden forms, wallet activity, clipboard manipulation, or suspicious external form destination. An isolated reputation detection exists, but it is not corroborated by the broader checks and therefore remains a soft reputational signal rather than evidence of a scam. The real-world operator identity is not independently verified, so the legitimacy conclusion remains evidence-consistent rather than proven.

EVIDENCE

- The homepage and service content describe hosting, VPS, reseller, and domain-registration offerings with published plans and pricing.
- The site's contact and company-history content provides support information and business background; content analysis reported no red flags or suspected brand impersonation.
- External reputation checks reported no confirmed blacklist and no malicious result from the major phishing-protection check; abuse reporting showed 0 reports, while one isolated malicious detection remained unconfirmed.

Regulatory Verification Notes

The available evidence is consistent with an established small hosting business, but it does not independently establish the legal entity operating the service. No license, registration number, or regulatory authority is disclosed in the supplied business-model evidence; for a general hosting provider this is a transparency and applicability question, not a scam indicator. The site's identity and contact material should therefore be treated as a basis for ordinary commercial verification rather than proof of corporate identity. A third-party broker dataset produced no match and should be understood only as contextual reputation information, not as a licensing determination.

EVIDENCE

- The site's "Nosotros" and "Contacto" content identifies the service as a web-hosting provider and includes company-history and contact information.
- The business-model review records no claimed license, license authority, or license number.
- Hosted on AS63410 (PRIVATESYSTEMS - PrivateSystems Networks, US).
- TLS certificate issued by YE1 (DV), valid to 2026-10-11T01:52:58+00:00.

What to Verify Next

Before credential or payment interaction, an independent check should connect the operator named in the site's company-history material to a verifiable business record and confirm which consumer, data-protection, or service obligations apply to the transaction. The applicable service terms, cancellation and renewal conditions, refund treatment, service-level commitments, and payment-protection arrangements should also be reviewed through the provider's official channels. Login and purchase flows should be tested only after confirming that the relevant account and billing destinations remain within the provider's official domain and support process.

EVIDENCE

- The homepage contains a login form and purchase or signup functionality, creating a direct credential and payment interaction surface.
- The published service model involves recurring subscriptions and one-time domain or VPS purchases.
- The supplied legal and identity content provides business background but does not include a licensing or registration number.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website with a high-trust, low-risk posture and no observed scam or impersonation contradiction. The classification should remain qualified because the real-world operator identity has not been independently verified.

Infrastructure Integrity

The site resolves directly to a single hosting address rather than through a detected CDN or WAF edge layer. This provides a straightforward and observable hosting path but offers less intermediary protection than a mainstream edge-protection deployment; it is an infrastructure characteristic, not evidence of illegitimacy.

EVIDENCE

- Resolved to 158.106.131.222, with 1 unique IP and 0 detected edge IPs.
- No CDN was detected; the infrastructure assessment recorded 1 likely origin IP.
- The hosting country is US and the registry is ARIN.

Closing Assessment

Ordinary engagement is reasonable after routine independent checks of the commercial counterparty, service terms, and payment protections; credentials or payments should follow only once those checks are satisfactory.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

StatusUNVERIFIED

Identity score30/100

Identity verification confidence50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of datawebhosting.com.ar.

- The request stayed on datawebhosting.com.ar. It was not redirected to another domain. CLEAR
- It is hosted on PRIVATESYSTEMS, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about datawebhosting.com.ar at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
