

Is dcddata.co.za legit? TrustSniffer's high-trust assessment: 100/100

dcddata.co.za

Verdict

100

OUT OF 100

HIGH TRUST

dcddata.co.za appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-04 by automated analysis. Classification confidence 70%.

What this site appears to be

Corporate homepage for DcData, a South African business technology provider offering security, hosting, cloud, voice, connectivity, licensing, hardware, and consulting services. The page provides policy links, direct contact details, a named operating company, and a rebranding link, with no visible high-risk financial or credential-harvesting behavior.

Evidence status and limitations

Evidence completeness: UNKNOWN

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2002.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

DcData is a South African business-technology provider presenting cybersecurity, cloud and web hosting, software licensing, business connectivity, voice services, IT hardware, and consulting offerings to organizational customers, with an apparent revenue model based on subscriptions, infrastructure services, equipment sales, licensing, and professional-service engagements.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behavior, or other scam indicators were observed. The site's named operating identity aligns with its longstanding domain provenance and coherent corporate purpose. External reputation screening was clean, while behavioral examination found no credential-harvesting forms, cloaking, wallet-related activity, clipboard interference, or suspicious scripts.

- The domain registration record identifies Linux Tech (Pty) Ltd and Linux Tech as registrar; the domain was registered on 7 March 2002 and is approximately 24.42 years old.
- The domain's archive contains 178 snapshots from 5 August 2002 through 7 June 2026, spanning 25 tracked years, with no detected suspicious repurposing or semantic drift.
- The corporate homepage names DcData, provides direct business contact details, and presents a consistent business-IT service portfolio without financial-return promises or deceptive sensitive-data requests.
- External threat-reputation checks recorded no malicious or suspicious detections, no reported abuse, and an established top-one-million traffic presence at rank 165,693.

Regulatory Verification Notes

The website provides a named corporate identity and links to its Terms of Service, Privacy Policy, ISPA Code of Conduct, Cloud Hosting Acceptable Use Policy, Cloud Hosting Service Level Agreement, and B-BBEE certificate. No sector-specific license or registration number is presented in the supplied page evidence; however, the site operates as a general business-technology provider rather than representing itself as a regulated financial or investment service. The absence of broker-dataset recognition is therefore not a negative legal or reputational finding.

- The homepage's information and policy navigation exposes contractual, privacy, industry-code, hosting-use, service-level, and corporate-certification materials.
- The homepage describes service-level agreements and IT security auditing among its professional services, supporting a conventional enterprise-service operating model.

- The site's transport encryption uses a DV certificate issued by GoGetSSL RSA DV CA, valid until 12 November 2026.
- The registration record lists an expiration date of 7 March 2027.

What to Verify Next

Prospective enterprise customers should match the legal name, commercial terms, service scope, data-handling obligations, and service-level commitments against procurement documentation before contracting. Material vendor relationships and certificates should be confirmed through the relevant issuers, while official contact channels should be independently confirmed for high-value onboarding or payment instructions.

- The homepage presents products associated with Fortinet, Sophos, Proofpoint, ESET, Kaspersky, SentinelOne, Red Hat, SUSE, Proxmox, Microsoft, Dell EMC, and HPE, making vendor authorization relevant to procurement due diligence.
- The client-resource navigation includes new-customer signup and a ClientZone, indicating that contractual onboarding and authenticated customer services form part of the operating workflow.
- The homepage advertises cloud mailboxes, domains and DNS, virtual-machine hosting, connectivity, and voice infrastructure, which may involve distinct availability, security, retention, and data-processing obligations.
- The published policy set provides the appropriate source material for comparing advertised services with proposed contractual commitments.

Summary Verdict

The website is legitimate, established, and trustworthy. Its corporate identity, long operational provenance, coherent enterprise offering, clean external reputation, and benign observed behavior converge on a high-confidence assessment suitable for normal interaction, including account login and standard use.

Infrastructure Integrity

The site resolves directly to a likely origin address in South Africa rather than operating behind a CDN or WAF. It is served from AS328423 by Linux Tech - Linux Tech, ZA; this identifiable, internally consistent hosting posture supports infrastructure accountability, although infrastructure configuration alone does not establish legitimacy.

Closing Assessment

Normal engagement is appropriate, with routine enterprise procurement and contractual due diligence applied before commencing material services or payments.

Written analysis generated 2026-08-04 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of dcddata.co.za.

- The request stayed on dcddata.co.za. It was not redirected to another domain. CLEAR
- Registration is published under Linux Tech. CLEAR
- DNS for this domain is served by co.za, across 3 name servers. NOTED
- The registration is paid up to 2027-03-07. NOTED
- The earliest public archive of this site is from 2002-08-05. CLEAR
- It is hosted on Linux Tech, from a server in ZA. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about dcddata.co.za at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
