

Is dcloud.net.cn legit? TrustSniffer's high-trust assessment: 100/100

dcloud.net.cn

Verdict

100

OUT OF 100

HIGH TRUST

dcloud.net.cn appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 55%.

What this site appears to be

Official site for DCloud (数字天堂) presenting developer tools (HBuilderX), the uni-app framework and a suite of cloud/operation services and plugins. Target audience: application developers and enterprises seeking cross-platform development and associated services.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

DCloud (数字天堂) is a corporate developer-platform website presenting HBuilderX, the uni-app cross-platform framework, uniCloud backend services, developer SDKs, cloud and operational services, and a plugin marketplace for application developers and enterprise users. Its apparent business model combines freemium software with paid plugins, platform services, and enterprise development offerings.

Scam/Impersonation Risk

No contradictions, phishing indicators, or confirmed impersonation signals were observed. The site's content is coherent with a software and developer-services business, and its operational behavior showed no external posting, hidden forms, wallet interaction, or suspicious script activity. A brand-similarity heuristic associated the page with "cloud.microsoft," but the association was not supported by the page's subject matter or observed behavior and does not constitute an identity contradiction. The available evidence is therefore consistent with an established, apparently legitimate website, while not independently proving the real-world operator's identity.

EVIDENCE

- The homepage identifies DCloud/数字天堂 and presents a structured corporate product catalogue for developers rather than a deceptive financial or credential-harvesting proposition.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with no phishing or blacklist hit.
- Browser behavior recorded 0 external XHR requests, 0 hidden forms, 0 wallet-provider detections, and 0 suspicious inline scripts across 2 successful runs.
- The domain registration record shows creation on 2013-07-17 and an age of 13.08 years.

Regulatory Verification Notes

The site appears to operate as a software, SaaS, and developer-services platform rather than as a financial or otherwise regulated service. No licensing claim or license number is presented in the supplied content; this is a disclosure point for commercial due diligence, not evidence of a scam. The homepage names DCloud/数字天堂 and provides product, documentation, agreement, community, and developer-service areas, but the connection between those on-site labels and an independently verified legal entity remains unconfirmed. External reputational context contained no broker-data match, and the broader technical and traffic signals support an established web presence.

EVIDENCE

- The homepage is classified as a corporate/product homepage with a legitimate SaaS business model and no page-level red flags.
- The site is served from AS37963, ALIBABA-CN-NET – Hangzhou Alibaba Advertising Co., Ltd., CN.
- The transport certificate is issued by Certum Domain Validation CA SHA2, uses DV validation, and is valid through 2026-09-25.
- The recorded traffic rank is 16229, within the global top 1 million.

What to Verify Next

Before a paid enterprise engagement or submission of credentials, the contracting entity associated with DCloud/数字天堂 should be confirmed through an independent corporate source rather than relying solely on on-site branding. Commercial users should also review the applicable service agreement, cancellation or refund provisions, data-handling terms, and payment protections; any service that is represented as regulated should be checked against the relevant official authorization registry. Official support and contact channels should be confirmed through an independent route before sensitive account or payment activity.

EVIDENCE

- The homepage provides links for “许可协议,” developer administration, documentation, and service areas that can be used to identify the applicable contracting terms.
- No login form, sensitive form, or untrusted form destination was observed on the captured homepage.
- The site presents multiple service categories and enterprise-facing offerings, making contracting-entity and commercial-terms confirmation relevant before paid use.

Summary Verdict

The overall posture is **high trust and low risk**, with the available evidence consistent with an established, apparently legitimate website. The classification supports normal browsing and ordinary platform interaction, but it should not be treated as independent proof of the operator’s legal identity.

Infrastructure Integrity

The site resolves through a single directly reachable origin address, with no detected CDN or WAF layer and no edge-IP distribution identified. This provides less protective mediation than an edge-delivery architecture, but it is an infrastructure characteristic rather than evidence of maliciousness.

Closing Assessment

Normal use is proportionate to the assessed posture; independent confirmation of the contracting entity, commercial terms, and payment protections should precede credential submission or payment activity.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of dcloud.net.cn.

- The request stayed on dcloud.net.cn. It was not redirected to another domain. CLEAR
- Registration is published under 北京万维通港科技有限公司. CLEAR
- DNS for this domain is served by dnsv4.com, across 2 name servers. NOTED
- The registration is paid up to 2028-07-17. CLEAR
- It is hosted on ALIBABA-CN-NET, from a server in CN. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about dcloud.net.cn at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
