

Is deccanclub.net a scam? TrustSniffer's high-risk assessment: 0/100

deccanclub.net

Verdict

0

OUT OF 100

CRITICAL RISK

deccanclub.net shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 75%.

What this site appears to be

This is a default Plesk-generated domain page for deccanclub.net. It advertises Plesk features and site-builder tooling and contains no login or transactional forms.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

At a glance

The checks that decide most of this verdict.

Malware engines	11 flagged it VirusTotal	RISK
Google Safe Browsing	Not listed Google	CLEAR
Abuse reports on the host	0 reports AbuseIPDB; shared hosting inflates this count	NOTED
Domain age	7.3 years old Registered history	CLEAR

Certificate	Encrypted connection Issued by YR1	NOTED

The page as captured

<https://deccanclub.net/>

What deccanclub.net served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2019.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

deccanclub.net currently presents a default Plesk-generated hosting page rather than an operating business website. Visitors see information about Plesk, its Sitejet Builder and WP Guardian products, and general hosting-management features; the page does not present a defined commercial service, customer onboarding journey, or transactional business model.

Scam/Impersonation Risk

The site has a confirmed high-risk reputation contradiction. External security intelligence recorded 11 malicious detections, including detections by Fortinet and Sophos, and the domain is listed by multiple external blacklist sources. This finding is materially more significant than the page-level content, which appears to be a generic Plesk placeholder with no visible login or payment workflow. The site's identity is therefore unverified, and the benign appearance of the current page does not resolve the external threat findings. No separate brand-impersonation or conflicting legal-entity signal was observed.

EVIDENCE

- The homepage is titled “Domain Default page” and identifies itself as generated by Plesk; it contains no visible login, payment, or transactional form.
- Domain registration records show creation on 2019-05-21 and an age of 7.25 years; the registrar is PDR Ltd. d/b/a PublicDomainRegistry.com.
- The archive contains 217 snapshots spanning 2019–2026, with 8 years tracked and a maximum observed gap of 1 year.
- External reputation analysis recorded 11 malicious detections and confirmed blacklist coverage from two sources.

Regulatory Verification Notes

The current page provides no operating-company description, regulatory authorization, license number, or regulated-service claim. This is a disclosure and verification gap rather than, by itself, evidence of fraud. The registration record identifies “MR.C.R.SAMANTARAY.” and “Scorpio Technologies,” but the available evidence does not independently connect those details to an operating entity behind the website. The absence of a broker-dataset match provides no positive regulatory conclusion.

EVIDENCE

- The homepage describes Plesk hosting functionality rather than a licensed financial, trading, investment, or commercial service.
- No license authority or license number is presented on the available page.
- The site’s TLS certificate is domain-validated, issued by YR1, and valid through 2026-10-11.
- The site’s transport encryption is present and operational, but domain validation does not independently establish the operator’s identity or regulatory status.

What to Verify Next

Before any sensitive interaction, an institution should independently confirm the intended operator through an offline or previously established channel, check any claimed authorization directly with the relevant official registry, and confirm that the domain is the institution’s intended destination rather than a misdirected or repurposed host. Security controls should also block or quarantine the domain pending resolution of the external blacklist findings.

EVIDENCE

- The homepage is a Plesk default page and does not identify a substantive business operator or service.
- Browser telemetry recorded two successful observation runs and two non-whitelisted external POST requests, despite the absence of visible transactional forms on the page.
- The page contains no login form, hidden form, wallet connection, or payment onboarding flow in the observed content.
- The domain resolves successfully to a single hosting address rather than to a documented corporate web presence.

Summary Verdict

The overall posture is **critical trust risk**, driven by confirmed external malicious and blacklist findings that outweigh the site’s currently benign placeholder presentation. The real-world operator remains unverified, so the domain should not be treated as an established or approved business destination for sensitive interaction.

Infrastructure Integrity

The domain is hosted through ISSPL-IN – IBEE Software Solutions Pvt. Ltd., IN, on AS58909, with infrastructure resolving in Luxembourg and no detected CDN or WAF layer. The direct hosting arrangement provides limited intermediary protection, and the valid domain-validated certificate should be regarded only as transport encryption, not as evidence of legitimacy.

Closing Assessment

Sensitive use, credential submission, financial activity, and trust based solely on the current page should remain suspended until the external reputation findings and the site’s operating identity have been independently resolved.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

1 finding contributed to this verdict, raised by analysis engine, behaviour in a sandbox, external reputation.

- 01 Sensitive Interaction Risk
- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
 - The page sent data to a destination TrustSniffer does not recognise.
Behaviour in a sandbox rule:BEHAV_NONWHITELISTED_POSTS
 - A large share of what the page loaded came from other domains.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_MODERATE
 - An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of deccanclub.net.

- The request stayed on deccanclub.net. It was not redirected to another domain. CLEAR
- Registration is published under PDR Ltd. d/b/a PublicDomainRegistry.com. CLEAR
- DNS for this domain is served by orderbox-dns.com, across 4 name servers. NOTED
- The registration is paid up to 2027-05-21. NOTED
- The earliest public archive of this site is from 2019-12-16. CLEAR
- It is hosted on ISSPL-IN, from a server in LU. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about deccanclub.net at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
