

Is defillama.com legit? TrustSniffer's high-trust assessment: 100/100

defillama.com

Verdict

100

OUT OF 100

HIGH TRUST

defillama.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-07-31 by automated analysis. Classification confidence 55%.

What this site appears to be

A comprehensive DefiLlama dashboard presenting DeFi and cryptocurrency market metrics, including TVL, stablecoins, trading volumes, protocol revenue, yields, token data, exchanges, hacks, bridges, NFTs, fundraising, and analytics tools. The page promotes premium research, APIs, dashboards, newsletter subscriptions, and a DEX aggregation service without making guaranteed-profit claims or directly requesting deposits.

Evidence status and limitations

Evidence completeness: UNKNOWN

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an established DeFi and cryptocurrency intelligence platform that presents market data, protocol rankings, research, APIs, custom dashboards, and aggregation tools, with a business model centred on premium subscriptions and institutional analytics rather than soliciting deposits or promising investment returns.

Scam/Impersonation Risk

No identity contradictions, impersonation indicators, phishing behaviour, or confirmed malicious reputation signals were observed. The homepage's extensive coverage of total value locked, yields, stablecoins, token markets, protocol revenue, exchanges, hacks, bridges, NFTs, and fundraising is consistent with a data-and-analytics service. Its DEX aggregation feature increases transaction sensitivity, but testing detected no wallet-provider interaction, wallet-draining behaviour, clipboard interference, hidden forms, deceptive return claims, or external password submission. The domain is also long-established and has a strong global traffic footprint, supporting continuity and broad public use.

- The homepage presented ETH, USDT, and USDC analytics alongside protocol, chain, market, security-incident, and research datasets, without guaranteed-profit claims or direct deposit solicitation.
- Interactive testing of the homepage completed successfully twice and detected 0 wallet-connect runs, 0 wallet-sensitive runs, 0 wallet-drainer runs, 0 clipboard-hijack runs, and 0 hidden forms.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no phishing finding, no confirmed malicious listing, and 0 abuse reports for the observed infrastructure.
- The domain was registered in 2020 and is approximately 5.76 years old; it held global traffic rank 39,911 at assessment time.

Regulatory Verification Notes

The visible navigation includes About/Contact, Terms of Service, Privacy Policy, Investor Relations, data definitions, and MiCA-related material, indicating a developed disclosure and governance framework. No regulatory licence claim, named licensing authority, or licence number was identified in the supplied page evidence. That is not inherently adverse because the observed core service is analytics-oriented SaaS rather than a broker or deposit-taking investment scheme; it remains a scope question for institutions intending to use transactional or paid services. No matching broker record was identified in the supplied third-party broker context, which is reputational context only and does not establish regulatory status. Domain administration through Cloudflare and a valid certificate issued by a recognised issuer further support operational maturity.

- The homepage navigation exposed About/Contact, Terms of Service, Privacy Policy, Investor Relations, API Reference, data definitions, pricing, and subscription functions.

- The observed service was hosted on AS13335 (CLOUDFLARENET – Cloudflare, Inc., US), with Cloudflare, Inc. also recorded as the domain registrar.
- The site's transport encryption used a WE1-issued DV TLS certificate valid until 2026-10-18.
- The supplied site material contained no claimed licensing authority or licence number, while the third-party broker dataset returned no matched broker profile.

What to Verify Next

Enterprise onboarding should confirm the contracting entity and applicable terms directly from the legal documents, establish whether paid API, premium research, or aggregation use creates regulated-service dependencies in the relevant jurisdiction, and validate official support channels through an independently sourced route. Procurement and security teams should also document data provenance, service-level commitments, incident-notification arrangements, and API-access controls before production integration.

- The homepage offers premium research, institutional analytics, APIs, custom dashboards, spreadsheet integration, and subscription access, making contractual scope and data-use rights relevant to procurement.
- The site provides dedicated Terms of Service and Privacy Policy entry points suitable for legal and privacy review.
- The navigation includes support, report-incorrect-data, API-reference, and project-listing functions that can be used to validate operational escalation and data-correction procedures.

Summary Verdict

DefiLlama presents as a legitimate, established, and trustworthy website with coherent identity, mature utility-focused content, a substantial public footprint, and clean technical and reputational observations. No evidence supplied indicates fraud, phishing, impersonation, or deceptive investment solicitation. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The website is protected by Cloudflare's CDN/WAF, and all eight observed addresses were Cloudflare edge nodes rather than origin candidates. This reduces direct exposure of the underlying server and provides conventional availability and application-layer protections; it is a mitigating security control, not independent proof of legitimacy.

Closing Assessment

Prospective users may proceed with normal use, while enterprise adoption should follow standard legal, privacy, procurement, and integration-security due diligence proportionate to the intended service scope.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	73/100
Identity verification confidence	37%

- Trusted social count=1

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of defillama.com.

- The request stayed on defillama.com. It was not redirected to another domain. CLEAR
- Registration is published under Cloudflare, Inc.. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2032-10-26. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about defillama.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
