

Is delishkitchen.tv legit? TrustSniffer's high-trust assessment: 100/100

delishkitchen.tv

Verdict

100

OUT OF 100

HIGH TRUST

delishkitchen.tv appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-03 by automated analysis. Classification confidence 75%.

What this site appears to be

Homepage of DELISH KITCHEN, a Japanese cooking and recipe-video platform operated by every, Inc. It offers extensive searchable recipes, rankings, seasonal articles, cooking guidance, premium services, and commercial resources, alongside a consent platform supporting personalized advertising and data processing by numerous vendors.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2017.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an established Japanese cooking platform operated by every, Inc., presenting searchable recipes, instructional videos, popularity rankings, seasonal food articles, meal-planning guidance, and an optional premium service supported by advertising and commercial partnerships.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behavior, or deceptive financial activity were observed. The long-established domain and continuous historical presence align with the current recipe-platform identity, while independent reputation checks found no malicious classifications or reported abuse. The homepage contained no sensitive forms, hidden forms, wallet interactions, credential forwarding, cloaking, or suspicious inline scripts.

- The homepage was classified as a recipe portal and contained no login form, sensitive form, hidden form, or untrusted form destination.
- The domain registration record shows: Registered 2016 (~9.97 years old).
- The historical record contains 321 archive snapshots spanning 2017-04-28 to 2026-07-22 (10 years tracked), with no detected semantic repurposing.
- External reputation telemetry recorded 0 malicious and 0 suspicious classifications, no malicious safe-browsing finding, and 0 abuse reports.

Regulatory Verification Notes

The homepage identifies every, Inc. as the platform operator and presents a mature, content-led business rather than a regulated financial service. Its subject matter and commercial model do not create an evident financial-licensing expectation. Nutritionist-supervision claims and the presence of legal policies provide additional accountability signals; domain registration privacy is an ordinary administrative detail and does not conflict with the disclosed operator identity.

- The homepage identifies DELISH KITCHEN as operated by every, Inc. and states that all recipes are supervised by registered dietitians.
- The site presents legal policies alongside editorial, premium, advertising, and business-service content.
- The domain is registered through ENOM, INC., with an expiry date of 2026-08-16.
- The site's transport encryption uses an Amazon RSA 2048 M04 domain-validated certificate, valid to 2027-03-18.

What to Verify Next

Routine consumer due diligence should focus on reviewing the premium service’s current billing, renewal, and cancellation terms before subscribing, and selecting consent preferences appropriate to the intended level of personalization. Commercial counterparties should independently confirm the relevant contracting entity, authorized representative, and service terms through the company’s published corporate channels.

- The homepage advertises an optional premium recipe service, making its subscription conditions relevant before purchase.
- The homepage displays a consent mechanism covering personalized advertising and data processing by multiple vendors.
- Observed browser disclosures include cross-site vendor data sharing, device linking and profiling, and a request for precise geolocation.
- The homepage also presents commercial resources and business solutions, supporting entity-level checks for enterprise engagements.

Summary Verdict

The website presents as a legitimate, established, and trustworthy cooking-content platform. Its identity, historical continuity, clean reputation, substantial content footprint, and benign observed behavior converge consistently, with no contradictory risk signals identified. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The site is served through Amazon infrastructure in the United States. This is consistent with mainstream managed hosting and provides a credible operational foundation, although hosting infrastructure is a mitigating technical signal rather than independent proof of legitimacy.

- The site’s hosting infrastructure is served from AS16509 (AMAZON-02 — Amazon.com, Inc., US) at the observed address 3.164.206.60.

Closing Assessment

Prospective users may proceed with normal use, applying ordinary subscription and privacy-preference review appropriate to any established advertising-supported consumer platform.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about delishkitchen.tv at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
