Full analysis

Overview

Deutsche-bank.de is a corporate banking website presenting Deutsche Bank's retail and corporate financial-services offering, including current accounts and cards, savings and investments, loans and mortgages, insurance, advisory services, online banking, and customer-support options. Its apparent business model is that of an established bank providing deposit, lending, investment, insurance, and advisory products.

Scam/Impersonation Risk

No scam, phishing, impersonation, blacklist, or identity-contradiction signals were observed. The homepage presents a coherent Deutsche Bank banking service, includes customer-support and legal/footer pathways, and does not expose a login form, hidden sensitive form, wallet connection, or untrusted form destination in the captured page. Available evidence is therefore consistent with an established, apparently legitimate website, although the real-world operator identity is not independently verified. Evidence:

- The homepage identifies the service as Deutsche Bank banking and provides structured navigation for retail, corporate, institutional, and public-sector customers.
- The captured homepage returned HTTP 200 in both recorded behavioral runs; no login form, hidden form, password-external form, wallet connection, or clipboard-hijacking activity was detected.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with 0 abuse reports and no blacklist or phishing hit.

Regulatory Verification Notes

The site provides banking, investment, lending, insurance, advisory, contact, and legal-information pathways, which is consistent with a mature financial-services presentation. The available material does not independently verify the operator's legal identity or establish a specific regulatory authorization from the supplied evidence; this is a verification point rather than evidence of a scam. A third-party broker-reputation dataset produced no match, which is contextual support only and not a licensing determination. Evidence:

- The page title is "Banking, Geldanlage und Beratung | Deutsche Bank," and the homepage includes product, customer-support, and legal/footer content.
- The resolved service infrastructure is recorded as AS8373, DEUBA-NET – Deutsche Bank AG, DE.
- The site's transport encryption uses an EV certificate issued by DigiCert EV RSA CA G2 for DEUTSCHE BANK AG, valid to 2027-01-08T23:59:59+00:00.

What to Verify Next

Before credential or payment interaction, an institution should independently confirm the relevant Deutsche Bank legal entity and applicable authorization through the official financial-services registry for the jurisdiction

involved. It should also reach the bank through an independently sourced official contact route, review the applicable account and transaction terms, and confirm payment-protection arrangements before proceeding with a non-routine or high-value action. Evidence:

- The homepage provides contact and customer-support pathways that can be compared with independently sourced official details.
- The captured page contains links to legal and customer-disclosure information that can be reviewed alongside the applicable jurisdictional registry entry.

Summary Verdict

The overall posture is high trust and low risk, with the available evidence strongly consistent with an established, apparently legitimate banking website. Normal browsing and ordinary banking workflows are consistent with the assessment, subject to routine independent confirmation of the real-world operator before sensitive credential or payment activity.

Infrastructure Integrity

The service resolves through AS8373, identified as DEUBA-NET – Deutsche Bank AG, while the observed technical endpoint is associated with AS16509, Amazon.com, Inc. No CDN or WAF was detected in the supplied infrastructure facts, and the service presents a single resolved hosting path rather than a concealed origin architecture. The EV DigiCert certificate provides a meaningful transport-integrity and organization-binding signal, but hosting and certificate controls remain mitigating technical indicators rather than proof of identity.

Closing Assessment

Proceed with ordinary use after completing standard independent merchant-identity, terms, and payment-protection checks appropriate to the intended transaction, with additional confirmation for unusual requests or high-value activity.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	73/100
Identity verification confidence	74%

- Trusted social count=1

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of deutsche-bank.de.

- The request stayed on deutsche-bank.de. It was not redirected to another domain. CLEAR
- DNS for this domain is served by db-dns.de, across 9 name servers. NOTED

- It is hosted on AMAZON-02, from a server in US. **NOTED**

About this assessment

A trust score summarises the evidence TrustSniffer could collect about deutsche-bank.de at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
