

Is devfolio.co legit? TrustSniffer's high-trust assessment: 100/100

devfolio.co

Verdict

100

OUT OF 100

HIGH TRUST

devfolio.co appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 55%.

What this site appears to be

Devfolio is a platform for discovering and organizing hackathons, showcasing developer portfolios, and providing tooling for event organizers. The page contains event listings, testimonials, links to company features, and community join links.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Devfolio is a community and software platform for discovering and organizing hackathons, showcasing developer portfolios and projects, and connecting builders with event organizers and companies. Its homepage presents event listings, participant and organizer features, testimonials, community links, and claimed growth figures of more than 950,000 builders, 80,000 projects, and 1,500 hackathons.

Scam/Impersonation Risk

No scam, phishing, impersonation, blacklist, or conflicting-identity contradictions were observed. The homepage presents a coherent community-platform purpose, while the available behavioral evidence found no hidden forms, external password forms, wallet-drainer activity, clipboard interception, cloaking, or suspected brand impersonation. The site's claims and testimonials are substantive but largely self-published, so they support apparent legitimacy without independently proving the real-world operator's identity.

EVIDENCE

- The homepage identifies Devfolio as a hackathon and developer-community platform and contains no reported fraud indicators.
- Behavioral testing recorded no hidden forms, no password forms submitted to external destinations, zero wallet-connect or wallet-drainer runs, and no cloaking.
- External reputation checks recorded zero malicious and zero suspicious detections, with no blacklist or phishing hit reported.
- The domain was registered on 2017-12-26T20:17:39Z and is 8.63 years old.

Regulatory Verification Notes

The available material is consistent with an established software and community service rather than a platform making a regulated financial-services claim. The site exposes About, Terms, Privacy Policy, Blog, Hackathons, and organizer-related navigation, but the available evidence does not show a corporate registration number, regulated license, or named licensing authority. This is a verification and disclosure point, not evidence of deception. Registration privacy through Withheld for Privacy ehf is an administrative ownership detail, while the registrar is Namecheap Inc. A separate broker-context check produced no match, which is a reputational signal only and not a regulatory determination.

EVIDENCE

- The homepage and navigation identify the business category as a SaaS/community platform and link to Terms and Privacy Policy pages.
- The available business-model material records no claimed license, license number, or licensing authority.
- The domain is registered through NAMECHEAP INC; the registration record lists Withheld for Privacy ehf as the privacy-service organization.
- The site is served on AS13335 through CLOUDFLARENET - Cloudflare, Inc., US; its TLS certificate is issued by WE1 at DV validation level and is valid to 2026-09-23T21:32:58+00:00.

What to Verify Next

Before credential or payment interactions, an organization should independently confirm the operator name and business contact details against the site's legal pages and, where relevant, confirm any claimed commercial authorization with the applicable registry. The stated community scale and testimonials should be treated as supporting context rather than substitute proof of corporate identity. Any account or transaction should use normal password hygiene, payment protections, and documented terms governing refunds, data use, and account termination.

EVIDENCE

- The homepage provides About, Terms, and Privacy Policy navigation suitable for checking the operator's disclosed identity and contractual terms.
- The homepage links to LinkedIn, GitHub, Twitter, and Telegram community destinations that can be cross-checked for consistent official representation.
- The site's interaction analysis found no sensitive form or untrusted form destination during the observed session.
- The available authority assessment places the site in a high authority band, supporting further independent identity checks rather than replacing them.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website with a high-trust and low-risk posture. No contradictory scam or impersonation signals were identified, although the real-world operator connection remains likely rather than independently verified.

Infrastructure Integrity

The site is protected by Cloudflare CDN/WAF infrastructure, with observed traffic terminating on Cloudflare edge addresses and no origin candidate identified in the analysis. The infrastructure resolved through AS13335, and the valid WE1-issued DV certificate provides transport encryption; these are mitigating technical controls, not proof of operator legitimacy.

Closing Assessment

Normal browsing and ordinary platform use are proportionate to the observed posture, while independent confirmation of merchant or operator identity, applicable terms, and payment protections should precede

credential submission or any payment interaction.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	38%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of devfolio.co.

- The request stayed on devfolio.co. It was not redirected to another domain. CLEAR
- Registration is published under NAMECHEAP INC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-12-26. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about devfolio.co at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
