Key findings

- Automated classification: Not Scam.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is a regional Spanish news publisher presenting Diario de Navarra content covering Navarra, Pamplona, Osasuna and other local topics, alongside advertising, cookie-consent controls, subscriber services, and account login functionality. Its apparent business model is editorial publishing supported by advertising, partner networks, and paid subscriptions.

Scam/Impersonation Risk

No scam, phishing, impersonation, or identity contradictions were observed. The homepage has the structure and content of a news and media service, with local news sections, search, subscription access, and subscriber login rather than deceptive financial or cryptocurrency offers. Dynamic page changes, external requests, and inline scripts were observed during interaction, but these are consistent with advertising, consent management, analytics, and subscription functionality; the analysis found no wallet activity, clipboard manipulation, hidden forms, credential-exfiltration destination, or malware detection.

EVIDENCE

- The homepage identifies its subject as Diario de Navarra and presents Navarra, Pamplona, sports, culture, tourism, and regional-news content.
- The homepage contains login, subscription, and search forms, with no untrusted form destination or hidden sensitive form identified.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with no phishing or impersonation finding.
- The site's behavioral analysis recorded 0 wallet-connect runs, 0 wallet-sensitive runs, 0 wallet-drainer runs, and 0 clipboard-write events.

Regulatory Verification Notes

The available evidence is consistent with an established, apparently legitimate news publisher, but it does not independently verify the real-world operator identity. The site presents privacy and cookie-management information, including consent and processing disclosures involving advertising partners. No financial or regulatory license claim is presented in the supplied site content; for this non-financial publishing model, that is a transparency point for ordinary identity and subscription checks rather than evidence of a scam. The absence of a matched broker-reputation record is contextual support only and is not a licensing determination.

EVIDENCE

- The homepage exposes a privacy-policy reference and cookie-consent controls describing advertising, analytics, personalization, and partner processing.
- The homepage presents paid-subscription and subscriber-account functionality but no supplied legal-page evidence independently verifies the operating entity.
- Hosting is identified as AS16509, AMAZON-02 – Amazon.com, Inc., US.
- The site uses a valid DV TLS certificate issued by Amazon RSA 2048 M01, valid through 2026-12-04T23:59:59+00:00.

What to Verify Next

Before credential or payment interactions, independently confirm the legal publisher identity associated with the subscription service, review the applicable subscription, cancellation, and refund terms, and confirm that payment protections are available through the selected payment method. Account users should also review the site's privacy and cookie settings to ensure that consent choices match the intended level of advertising and analytics processing.

EVIDENCE

- The homepage provides distinct entry points for "Iniciar Sesión," subscription access, privacy information, and cookie configuration.
- The business model is presented as advertising-supported publishing combined with paid subscriber services.
- The captured page contains no supplied evidence of a financial-service product, investment solicitation, or cryptocurrency transaction flow.

Summary Verdict

The overall posture is **high trust and low risk** for the site’s apparent informational publishing purpose. Available evidence supports an established, apparently legitimate website, while the real-world operator identity remains independently unverified; legitimacy should therefore be treated as evidence-consistent rather than proven.

Infrastructure Integrity

The website is protected by AWS CloudFront CDN/WAF infrastructure, with observed addresses serving as CDN edge infrastructure rather than directly exposed origin candidates. This provides a meaningful reduction in direct origin exposure and is a mitigating security factor, although protective hosting infrastructure alone does not establish operator legitimacy.

EVIDENCE

- AWS CloudFront was detected as the CDN/WAF, with 4 observed edge IP addresses and 0 likely origin candidates.
- The observed edge infrastructure is associated with AS16509 and Amazon.com, Inc., US.

Closing Assessment

Normal browsing is proportionate to the assessed posture; independent publisher-identity, subscription-term, and payment-protection checks should be completed before credentials or payments are submitted.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of diariodenavarra.es.

- The request stayed on diariodenavarra.es. It was not redirected to another domain. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about diariodenavarra.es at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
