- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2001.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Diario de Sevilla is an established regional Spanish news portal covering Sevilla, Andalucía, Spain, sports, culture, public affairs, and local alerts. Its apparent business model is editorial publishing supported by advertising, analytics, partner networks, and a paid-access option.

Scam/Impersonation Risk

No scam, phishing, impersonation, or identity contradictions were observed. The homepage contains a conventional login function, but the available page and behavior evidence show no hidden forms, external password-submission forms, wallet activity, clipboard manipulation, or credential-harvesting pattern. The site's long and continuous web presence, substantial traffic footprint, and clean external reputation are consistent with an established publisher rather than a recently created abuse operation.

EVIDENCE

- Domain continuity dates to 2001, with an authoritative age of 25.23 years.
- Web archives contain 5,000 snapshots across 22 tracked years, from 2001-05-17 through 2022-02-12, with a maximum observed gap of 1 year.
- The homepage is classified as a news and media portal, with no page-level red flags or detected brand-impersonation indicators.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with no external threat flag recorded.

Regulatory Verification Notes

The available evidence is consistent with an established, apparently legitimate regional publisher, but it does not independently verify the real-world operator identity. The site presents editorial publishing and a paid-access pathway rather than a financial or other regulated service, so no financial licensing conclusion follows from the reviewed content. Ordinary consumer-protection and merchant-identity checks remain appropriate before paid or credential-based interactions; this is a verification matter, not evidence of scam activity. No adverse broker-reputation match was identified.

EVIDENCE

- The site is served from AS16509, operated by AMAZON-02 - Amazon.com, Inc., with the observed infrastructure located in Ireland.
- The site's TLS certificate was issued by YE1, uses Domain Validation (DV), and is valid to 2026-11-03T06:42:21+00:00.
- The homepage contains substantial editorial content spanning local news, regional affairs, national topics, sports, culture, and public-safety reporting.
- The page links to established social-network destinations, supporting independent comparison of its public-facing identity.

What to Verify Next

Before credential or payment interactions, independently confirm the publisher's legal identity, review the applicable subscription, cancellation, and refund terms, and confirm that payment protections are available. Official social and contact channels should be matched through independently sourced records rather than relying solely on links presented by the site. Cookie and advertising-consent choices should also be reviewed in line with the organisation's privacy requirements.

EVIDENCE

- Homepage: the site provides links to WhatsApp, Instagram, Facebook, Twitter, YouTube, Flipboard, Telegram, and Threads for independent channel comparison.
- Homepage: cookie-consent messaging and advertising or analytics elements are present, making privacy and consent review relevant.
- Homepage: account-access and paid-access functions are exposed, making merchant-identity and payment-term checks relevant before commercial use.
- Homepage: structured metadata and a meta description were not detected; this is a presentation and discoverability limitation rather than a fraud indicator.

Summary Verdict

The overall posture is **high trust and low risk**. Available evidence is consistent with an established, apparently legitimate news publisher, although the connection to a specific real-world operator remains likely rather than independently proven.

Infrastructure Integrity

The site uses Amazon infrastructure with AWS CDN/WAF protection. The observed address was a CDN edge address, and no origin-server candidate was identified; this reduces direct origin exposure and is a mitigating security signal, but does not independently establish legitimacy.

EVIDENCE

- Hosting infrastructure: AWS CDN/WAF detected; 1 edge IP observed and 0 likely origin IPs identified.
- The observed edge address is 176.34.179.218 in AS16509, associated with AMAZON-02 - Amazon.com, Inc.

Closing Assessment

Proceed with normal prospective-user diligence, particularly independent identity, cancellation or return-term, and payment-protection checks before submitting credentials or making a payment.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	80/100
Identity verification confidence	80%

- Trusted social count=4

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of diariodesevilla.es.

- The request stayed on diariodesevilla.es. It was not redirected to another domain. CLEAR
- The earliest public archive of this site is from 2001-05-17. CLEAR
- It is hosted on AMAZON-02, from a server in IE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about diariodesevilla.es at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
