Key findings

- Automated classification: Not Scam.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

Dnews is a Greek-language online news portal covering politics, economics, domestic and international affairs, education, health, sports, entertainment, and related public-interest topics. Its apparent business model is an established ad-supported publishing operation supplemented by newsletters, syndication, branded content, and advertising.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent news-media structure rather than a financial, investment, or payment solicitation, and the available analysis found no phishing indicators, brand-impersonation pattern, malicious behavior, or sensitive login form. External reputation checks were clean, and the site has a strong global traffic footprint consistent with an established publishing property. The available evidence therefore supports a low scam and impersonation risk, while not independently proving the identity of the real-world operator.

EVIDENCE

- The homepage is classified as a news and media portal, with Greek-language sections for politics, economy, Greece, international news, education, employment, entertainment, and English-language news.
- The homepage contains one newsletter-signup form, with no login form, hidden form, wallet connection, or password submission to an external destination detected.
- External checks recorded zero malicious and zero suspicious detections, no phishing-site finding, and no blacklist finding; the site's traffic rank is 15666.
- The homepage's behavior analysis recorded no cloaking, wallet-drainer, clipboard-hijacking, or suspicious inline-script activity.

Regulatory Verification Notes

The site presents publisher contact information and company-registration details, which materially supports transparency as a media publisher. No financial-service license or licensing number is claimed in the supplied site analysis; for this apparent news business, that is a verification point rather than evidence of deception. The operator's real-world identity remains independently unverified, so the site should be described as apparently legitimate and evidence-consistent with an established publisher, not as identity-proven. No separate broker-reputation match was identified.

EVIDENCE

- The homepage content summary records publisher contact and company-registration details on the page.
- The site is served from AS197540, identified as netcup-AS — netcup GmbH, Germany.
- The site's TLS certificate is issued by RapidSSL TLS RSA CA G1, uses DV validation, and is valid through 2026-10-08T23:59:59+00:00.
- The homepage contains substantive editorial content across nine identified topic areas and returned successfully with a 200 response.

What to Verify Next

Before credential or payment interactions associated with any ancillary service, independently confirm the publisher's legal entity and registration details through the relevant official registry. Confirm the site's official contact channels through an independently sourced route, and review the newsletter's consent, privacy, advertising, and branded-content disclosures. Where any transaction is proposed outside ordinary news access, confirm the counterparty, refund terms, and payment protections separately from the website's own claims.

EVIDENCE

- The homepage identifies the site as “Dnews” and exposes navigation across multiple editorial categories.
- The homepage’s business-model analysis describes advertising, newsletters, syndication, and possible promoted content as revenue channels.
- The site uses one analytics service and one advertising network, consistent with the stated publishing model.
- Behavioral testing completed two successful runs and detected no password-external-form or hidden-form activity.

Summary Verdict

The overall posture is **high trust and low risk**, with the available evidence consistent with an established, apparently legitimate news website. The conclusion is strong at the website-risk level, but the operator’s real-world identity is not independently verified; legitimacy should therefore be regarded as apparent rather than proven.

Infrastructure Integrity

Cloudflare provides the site’s CDN and WAF protection, with observed edge infrastructure on AS13335 operated by Cloudflare, Inc. in the United States. The observed IP addresses were CDN edges rather than an exposed origin, which mitigates direct origin exposure but is a protective infrastructure characteristic, not proof of legitimacy.

Closing Assessment

Ordinary browsing and newsletter use are proportionate to the assessed posture; before submitting credentials or payment details, standard independent checks of the relevant entity, terms, and payment protections should be completed.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of dnews.gr.

- The request stayed on dnews.gr. It was not redirected to another domain. CLEAR
- It is hosted on netcup-AS, from a server in AT. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about dnews.gr at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
