No screenshot is retained for this report.

## Key findings

---

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

## Full analysis

---

### Overview

This website is an official Indonesian government information portal presenting policies, guidance, FAQs, news, legal references, and contact procedures for registering and managing institutional `.go.id` and `.desa.id` domains. Its apparent purpose is public-service administration and digital-government support rather than commercial sales, investment, or user deposits.

### Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent government-service identity, and the available page analysis found no phishing, brand-impersonation, malicious-content, or suspicious behavioral indicators. The site's informational purpose, institutional domain-registration subject matter, and absence of commercial monetization are consistent across the available evidence. Normal interaction, including account login and standard use, is appropriate.

#### EVIDENCE

- The homepage identifies a government/public-service information portal covering institutional domain policies, registration guidance, FAQs, procedures, and security announcements.
- The homepage analysis found no red flags, no impersonation indicators, no sensitive forms, and no untrusted form destinations.
- The domain was registered through PANDI Registrar on 2014-09-22 and is recorded as 11.89 years old.

### Regulatory Verification Notes

The site provides public guidance on government-domain administration, including requirements, fees, procedures, legal references, and official contact information. No financial or commercial licensing claim is presented, which is consistent with the stated informational government-service model rather than a regulated financial offering. The ministry identity and the `.go.id` sovereign-domain context provide coherent institutional grounding, while the third-party broker dataset contains no matching record; that absence is contextual reputation evidence, not a legal determination.

#### EVIDENCE

- The homepage and information sections identify the site as a ministry portal for `.go.id` and `.desa.id` domain administration.
- The site's hosting is recorded as AS132634, IDNIC-EGOV-AS-ID - Direktorat E-Government Kementerian KOMINFO, ID.
- The site's TLS certificate is issued by Sectigo Public Server Authentication CA DV R36, uses DV validation, and is valid to 2027-01-07T23:59:59+00:00.
- The site's transport and reputation telemetry recorded a valid certificate and no malicious or suspicious detections.

#### What to Verify Next

For any institutional domain-registration action, the appropriate control is to follow the procedures and requirements published within the site's service sections and to confirm that communications correspond to the contact details presented on its contact page. Administrative teams should retain the relevant request, approval, and payment records where applicable, consistent with ordinary government-domain governance.

#### EVIDENCE

- The service-information pages provide published requirements, fees, and procedural guidance for domain administration.
- The contact page provides the official contact details used to support the portal's stated public-service function.

#### Summary Verdict

The website has a high-trust, established-entity posture supported by convergent identity, content, technical, and reputation evidence. It is a legitimate government information service, and ordinary account login and standard use are appropriate.

#### Infrastructure Integrity

The site does not use a detected CDN or WAF and resolves through one likely origin address rather than separate edge infrastructure. This provides less edge-layer mitigation than a CDN-backed deployment, but the observed hosting arrangement is consistent with the identified government network and does not introduce a legitimacy contradiction.

#### EVIDENCE

- Infrastructure resolution identified 1 unique IP, 0 edge IPs, and 1 likely origin IP.
- No CDN vendor was detected; the resolved hosting provider is IDNIC-EGOV-AS-ID - Direktorat E-Government Kementerian KOMINFO, ID.

#### Closing Assessment

Proceed with normal use of the portal under standard organizational access, approval, and record-keeping controls.

## What the analysis found

No rule findings contributed to this verdict.

## Identity verification

|                                  |            |
|----------------------------------|------------|
| Status                           | UNVERIFIED |
| Identity score                   | 55/100     |
| Identity verification confidence | 60%        |

- Identity verified on page

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

## What TrustSniffer observed

First-party facts recorded during the assessment of domain.go.id.

- The request stayed on domain.go.id. It was not redirected to another domain. CLEAR
- Registration is published under PANDI Registrar. CLEAR
- DNS for this domain is served by go.id, across 2 name servers. NOTED
- The registration is paid up to 2026-09-22. NOTED
- It is hosted on IDNIC-EGOV-AS-ID, from a server in ID. NOTED

## About this assessment

---

A trust score summarises the evidence TrustSniffer could collect about domain.go.id at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
