## Key findings

---

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

## Full analysis

---

### Overview

This website is a South African domain-registration and web-hosting provider offering domain services, web and WordPress hosting, VPS infrastructure, reseller programs, SSL certificates, and customer support resources through a conventional subscription and service-based model.

### Scam/Impersonation Risk

No contradictions were observed. The homepage and product pages present a coherent commercial service model, including domain registration, cPanel hosting from R109 per month, VPS hosting, reseller services, SSL certificates, a 60-day money-back guarantee, and a 99.9% uptime commitment. These are ordinary, internally consistent hosting claims rather than indicators of phishing, impersonation, or fraudulent investment activity. External reputation checks found no blacklist hit, malicious detection, phishing signal, or brand-impersonation finding; the domain also maintains an established public traffic footprint. Normal account login and standard service interaction are therefore appropriate.

#### EVIDENCE

- The homepage identifies the business as a provider of domains, hosting, VPS servers, reseller services, and SSL certificates, with a published support telephone number.
- Product pages present hosting prices, refund and uptime commitments, and service categories consistent with the stated business model.
- Domain registration: 1998-09-02; age 27.95 years; expiry 2029-09-02.

### Regulatory Verification Notes

The supplied pages describe commercial infrastructure and hosting services rather than a financial product. No financial-regulatory license number or registration claim is presented in the supplied content; this is a limited disclosure point for procurement and regulatory due diligence, not evidence of a scam. The site's technical identity is consistent with the named South African registrar and hosting operator, and its transport security uses a recognized certificate issuer. No matching third-party broker profile was identified.

#### EVIDENCE

- The technical registration record lists DIAMATRIX C.C. as registrar.
- The site is served from AS327979, DIAMATRIX C.C - DIAMATRIX C.C, ZA.
- TLS is issued by Certum DV TLS G2 R39 CA, uses DV validation, and is valid to 2027-01-05.
- The homepage and support resources identify a hosting-service business but do not display a financial license or registration number.

#### What to Verify Next

For enterprise onboarding or regulated procurement, confirm the contracting entity, applicable service terms, refund conditions, and any sector-specific registration requirements through the relevant official registry or procurement records. Before initiating a billing or support matter, confirm the official support and contact channels through an independently sourced business record.

#### EVIDENCE

- The support flow provides ticketing for support and billing enquiries, creating a defined channel for confirming service and account issues.
- The site publishes product pricing and a 60-day money-back commitment that can be checked against the applicable terms before purchase.

#### Summary Verdict

The website presents a legitimate, established, and trustworthy posture. Its long operating history, coherent commercial content, clean external reputation, and consistent technical identity support confidence in normal use, including account access and standard customer transactions.

#### Infrastructure Integrity

The site uses Cloudflare CDN/WAF protection, with observed delivery involving edge infrastructure and a potential origin candidate. This provides a useful layer of exposure mitigation and service resilience, although protective infrastructure is a security control rather than independent proof of business legitimacy.

#### EVIDENCE

- Cloudflare CDN/WAF protection is present in the observed hosting configuration.

#### Closing Assessment

Prospective customers may proceed with normal account login, service configuration, support, and purchasing activity, while applying the organization's standard contractual and procurement checks for material engagements.

Written analysis generated 2026-08-10 by the TrustSniffer Analysis Engine from the evidence in this report.

#### What the analysis found

No rule findings contributed to this verdict.

## Identity verification

|                                  |            |
|----------------------------------|------------|
| Status                           | UNVERIFIED |
| Identity score                   | 30/100     |
| Identity verification confidence | 50%        |

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

## What TrustSniffer observed

First-party facts recorded during the assessment of domains.co.za.

- The request stayed on domains.co.za. It was not redirected to another domain. CLEAR
- Registration is published under DIAMATRIX C.C.. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2029-09-02. CLEAR
- It is hosted on DIAMATRIX C.C, from a server in ZA. NOTED

## About this assessment

A trust score summarises the evidence TrustSniffer could collect about domains.co.za at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
