- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1999.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

e-shop.gr is a Greek-language online retail storefront offering consumer electronics, household appliances, computers, mobile products, tools, toys, gaming goods, books, and related merchandise. Its apparent business model is conventional e-commerce, supported by product sales, promotions, delivery, and customer account functionality.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent retail proposition rather than an investment, cryptocurrency, or other abuse-prone financial model; the reviewed content contains no phishing indicators, brand-impersonation signals, or unusual payment mechanics. External reputation checks were clean, and the site's long-running, continuous web presence is consistent with an established commercial operation. The operator's real-world identity remains independently unverified, so the apparent legitimacy of the storefront should not be treated as proof of a specific legal entity.

EVIDENCE

- Domain registration continuity: registered 1999 (26.70773442847365 years old).
- Web archive: 3,220 snapshots spanning 1999–2026, with 28 years tracked.
- The homepage was evaluated as a low-risk e-commerce page with zero reported red flags and no suspected brand impersonation.
- The domain has a strong global traffic footprint, ranked 21,196 and within the global top one million.

Regulatory Verification Notes

The available content supports an established retail presentation, but it does not independently verify the operator's legal identity. No licensing claim or registration number is presented for the retail activity; this is a transparency and merchant-verification matter rather than evidence of a scam. A separate broker-reputation dataset produced no match, which is contextual only and does not constitute a regulatory finding. The site's transport security is valid, although the certificate uses domain validation rather than enhanced organizational validation.

EVIDENCE

- Hosting is on AS25472, WIND-AS – Nova Telecommunications & Media Single Member S.A., Greece.
- The site's TLS certificate is issued by Sectigo Public Server Authentication CA DV R36, uses DV validation, and expires at 2026-11-29T23:59:59+00:00.
- The homepage provides a detailed catalogue and conventional e-commerce functions, including product ordering, delivery and store-pickup options.
- No broker-dataset match was recorded for the site.

What to Verify Next

Before credential or payment interactions, an independent check should connect the merchant name, customer-support channels, return terms, and payment-protection arrangements to the entity responsible for the transaction. The relevant commercial registry or consumer-protection resources should be used to confirm the merchant identity and applicable trading obligations, while payment should be made through a method offering appropriate dispute and chargeback protections.

EVIDENCE

- The homepage exposes contact, order-tracking, account-registration, and checkout/ordering functions.
- The site advertises free shipping above a stated purchase threshold and provides telephone-order functionality, creating specific merchant-service claims that can be checked against the final order terms.
- The reviewed page contains one login/checkout form and no detected untrusted form destination or hidden sensitive form.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture for ordinary retail use. The conclusion is strong at the website-risk level, while independent confirmation of the real-world operator remains outstanding.

Infrastructure Integrity

Cloudflare CDN/WAF protection is present, with observed edge infrastructure and a potential origin candidate; this reduces direct exposure and is a useful mitigating control, but it is not independent proof of legitimacy. The underlying hosting is resolved to Greek telecommunications infrastructure, and no high-risk abuse pattern was detected beyond standard protective measures.

Closing Assessment

Routine browsing is proportionate, while credentials and payments should follow ordinary independent merchant-identity, return-policy, and payment-protection checks.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of e-shop.gr.

- The request stayed on e-shop.gr. It was not redirected to another domain. CLEAR
- The earliest public archive of this site is from 1999-11-27. CLEAR
- It is hosted on WIND-AS, from a server in GR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about e-shop.gr at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that

evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
