

Is eandmengineering.ca legit? TrustSniffer's high-trust assessment: 100/100

eandmengineering.ca

Verdict

100

OUT OF 100

HIGH TRUST

eandmengineering.ca appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 50%.

What this site appears to be

Corporate website for E&M Engineering offering certified pressure-vessel design and fabrication, flow-control systems, and custom industrial engineering services with contact/quote lead capture and listed certifications and address.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Custom Electrical & Mechanical

What eandmengineering.ca served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2012.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

E&M Engineering is a corporate industrial-engineering and fabrication website presenting pressure-vessel design, piping, flow-control manifolds, custom fabrication, and project-based engineering services. Its apparent business model is to generate industrial contract and fabrication work through service information, project discussion, and quote-request channels.

Scam/Impersonation Risk

No contradictions were observed. The site presents a consistent E&M Engineering corporate/service identity, contains no login or password-collection function, and uses a standard contact and quote-request form rather than a sensitive transaction workflow. Available external checks found no malicious or suspicious detections, no phishing or impersonation indicators, and no confirmed blacklist signal. The established registration continuity and consistent archival presence further support an apparently legitimate site, although the available evidence does not independently verify the real-world operator behind the website.

EVIDENCE

- The homepage identifies E&M Engineering and describes pressure-vessel, flow-control, and custom-fabrication services.
- The contact and request-quote pages use one contact/quote form; no login form, hidden form, or external password submission was detected.
- The domain was registered on 2002-03-21 and is approximately 24.43 years old; archival records span 14 years, with observations from 2012-12-01 through 2025-07-31.

Regulatory Verification Notes

The site states that it operates to ASME, TSSA, ISO 9001:2015, and National Board “R” Stamp standards, and it describes certified design and fabrication capabilities. These are substantive on-site claims, but the supplied evidence does not independently verify the certifications or identify a regulatory licence number or registration reference. That is a verification and disclosure point appropriate for commercial due diligence, not evidence of a scam. The domain registration record names Tucows.com Co. as registrar and Cistel Technology Inc. as registrant, but the supplied evidence does not independently establish that registrant as the operating entity represented by the site.

EVIDENCE

- The homepage and services content state “ASME | TSSA | ISO 9001:2015 CERTIFIED” and describe National Board “R” Stamp authorization.
- The about and contact content presents E&M Engineering as the service provider and includes business contact details and an address.
- The domain is registered through Tucows.com Co.; the registration record lists Cistel Technology Inc. as owner.
- The site is hosted on AS29988, RCC-RDC-AS - Rogers Communications Canada Inc., CA; its TLS certificate is issued by YR2 with DV validation and is valid to 2026-10-30T13:38:58+00:00.

What to Verify Next

Before a commercial engagement, the prospective counterparty should confirm the legal entity named on the quotation or contract, independently validate the stated ASME, TSSA, ISO 9001:2015, and National Board credentials with the relevant issuing or accrediting bodies, and confirm the business address and contact channels through an independently sourced corporate record. Payment arrangements should use documented contractual terms and payment-protection controls appropriate to the transaction.

EVIDENCE

- The services and homepage pages identify the engineering and fabrication scope against which certification claims can be checked.
- The about and contact pages provide the identity, address, and business-contact information for independent confirmation.
- The request-quote page establishes the intended commercial workflow as project scoping and lead capture rather than an immediate online payment process.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate, low-risk corporate website. The high-trust posture is supported by coherent business content, stable technical operation, long registration continuity, and the absence of observed scam, phishing, or impersonation contradictions. The operator’s real-world identity remains independently unverified, so the conclusion is evidence-consistent rather than proof of corporate identity.

Infrastructure Integrity

The site resolves directly to a single origin address rather than operating behind a detected CDN or WAF edge layer. This is a neutral infrastructure characteristic; the identified Canadian hosting environment and valid transport encryption provide basic technical assurance but do not, by themselves, establish legitimacy.

Closing Assessment

Normal informational use and initiation of a business enquiry are proportionate to the assessed posture; credential or payment interactions should follow ordinary independent counterparty, certification, contractual, and payment-protection checks.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of eandmengineering.ca.

- The request stayed on eandmengineering.ca. It was not redirected to another domain. CLEAR
- Registration is published under Tucows.com Co.. CLEAR
- DNS for this domain is served by eondns.com, across 3 name servers. NOTED
- The registration is paid up to 2027-03-21. NOTED
- The earliest public archive of this site is from 2012-12-01. CLEAR
- It is hosted on RCC-RDC-AS, from a server in CA. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about eandengineering.ca at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
